## After the C5 it's the mobile micro!

Sinclair has confirmed rumours that it is working on a portable home computer — but it won't be on general release until next year.

Sir Clive Sinclair revealed that the machine will be based on both Spectrum and flat screen television technology and that it will be a 'no compromise machine'.

### Radical change

He also suggested that it would have a radically new form of data storage which Sinclair Research is currently developing for the QL machine. This wafer drive will have as its basis a complete silicon wafer which until now has only ever been used after being cut into sections or chips.

When ready for release the wafer will be able to store about half a megabyte of data. With battery back-up expected to last over a year and very simple copying facilities these wafers could make floppy discs optional.

The flat screen technology, also Sinclair developed, has only been seen in the portable TV which is about to go into full scale production. Sir Clive wouldn't admit that any breakthroughs had been made but he claimed that the portable would have a much larger screen.

### No compromise

'Portables are a compromise at the moment', he said. 'They compromise on display and on back-up storage facilities. People will buy our machine because it's the best machine there is and it is portable as well'.

## Acorn pledges to back home users

Acorn chairman Alexander Reid faced the press to explain the events leading up to Acorn's financial crisis and emphasise its continuing support for both the BBC and Electron.

'We are absolutely committed to remaining in the home computer market,' Dr Reid stated. 'We have no intention whatsoever of withdrawing.'

He continued: 'We will certainly be continuing to sell the Electron at least through this year, and thereafter. The BBC has effectively had a price cut with the £50 trade-in deal which is now available.'

Dr Reid was refuting the rumours that Acorn would pull out of home computing: the Italian business machine company Olivetti has bought up 49.3 per cent of Acorn's shares to enable the company to

Dr Alexander Reid

resolve its financial difficulties.

And Dr Reid didn't envisage any problem with the continuation of the BBC scheme for supplying micros to schools. 'The BBC isn't frightened by international links,' he said. 'And Italian school markets are very high on our list of priorities.'

# SPRITE MACHINE 64

## THE ULTIMATE SPRITE DESIGNER PACKAGE

### Featuring

- ★ **DISPLAY MODE** — A big object, for instance a ship in full sail, using all the eight sprites can be designed easily. All the eight sprites can be viewed together to give the full view of the ship. Any of the sprites making up the ship can be edited, scrolled or rotated while the whole ship is in view.
- ★ **OVERLAY MODE** — Up to eight sprites can be overlaid.
- ★ **ANIMATION** — A really useful feature. A horse can be taken through its paces from canter to full gallop.
- ★ **SCROLLED** — In normal or MULTI-COLOUR mode.
- ★ **336** sprites storage.
- ★ Many useful hints, tips and information about the working of the video chip in CBM 64.
- ★ Easy to incorporate the sprites in your own BASIC or machine code programmes.
- ★ A must for a BEGINNER or PROFESSIONAL programmer.
- ★ Ready to use sprites for beginners including a demonstration programme to show all the features of the Sprite Machine.

**Cassette version £9.95 Disk version £11.95**

# HOME COMPUTING WEEKLY

## CONTENTS

March 12-March 18, 1985 No. 103

### SOAPBOX

Magazines are regularly criticised for the quality of their program listings.

HCW has had it's mistakes too, but there are certain steps which you can take to give yourself a better chance of success.

When typing listings don't try to do too much at once. Do it in little sections with a rest period in between typing. Save the program to tape or disc each time you have a rest, then if you make a mistake you haven't lost everything. Use a ruler to make line following easier.

Try to understand the listing style. For example Spectrum listings are printed in HCW with all the graphic characters printed as underlined capitals. Put your machine in graphics mode and then press the letter shown. Commodore 64 listings often have control characters printed as reversed letters and symbols. We try to put REMs near these to explain the symbols, so read them carefully before typing the line.

We have tested all the programs in this and every other issue. If you really can't get a program to work let us know, but please remember that 90 per cent of errors are due to inaccurate typing. I know — I have typed in lots of listings myself.

Dave

*If you have something to say why not send us your thoughts. We will consider any points of view for Soapbox or for our letters page and we offer a prize for all those printed.*

### COMING SOON...

MICROPAC  
uSPEECH + uSLOT

**Double talk**

The battle for sales in the speech synthesiser market continues with Welwyn Systems releasing the Currah Micropac.

Currah Systems, who designed a number of speech synthesis units for home computers, suffered financial difficulties last year and the name and product were sold to dk'tronics.

The manufacturer of the systems is Welwyn Systems, who had an agreement to sell the products if Currah ceased trading. As a result, there are

now two companies selling Currah products under their own names.

The new Micropac is actually a repackaging of two previous products for the Spectrum computers. It contains both the uSpeech unit and the uSlot. The slot is needed if you want to add other peripherals to the unit besides the speech synthesiser.

Priced at just £25.95 the pack represents a saving of nearly £20 over the previous prices of the separate units. Both units are fully guaranteed by Welwyn.

*Welwyn Systems, Bedlington, Northumberland NE22 7AA*

Andrew Hewson Ted's 'Dad'

**Technical tips**

After being inundated with enquiries from players having problems with Technician Ted, Hewson Consultants has issued a set of tips for serious players.

The game, featured in a recent HCW competition, is set in an office environment in which you control Ted as he tries to get through a day's work.

We too have had a number of enquiries about the game, and we will soon be publishing the map in our Ventures column.

For those who can't wait, here are the tips from Hewson Consultants.

All tasks must be done in the right order, and you must work out the order for yourself. Technician Ted has a full event processor so that rooms change as the game progresses. If a room looks easy or empty, then it is probably not the time to attempt the task within it.

Technician Ted graphics are ultra-smooth and collision detection is exact, so that starting position is even more important than in ordinary platform games. The PAUSE facility can often be used to ensure that the correct starting position is used.

Similarly a jump can be made from a precise position by first jumping vertically, and then pressing left or right (as appropriate) whilst Ted is still in the air.

Time is of the essence. Many rooms have been timed so that the skilled player can pass through without pausing provided he makes the right moves from the correct positions.

Similarly when a task has been completed it can sometimes be faster to loose a life deliberately so that Ted is reset to the required exit.

The order in which tasks must be completed is roughly the same as might be expected during an ordinary working day.

Rest assured, the game can be completed within the time limit!

*Hewson Consultants, Hewson Hse, 566 Milton Trading Est, Milton, Abingdon, Oxon OX14 4RX*

## Deal sealed on war games

Two forces in the software industry have agreed to become allies in a new agreement signed recently.

Lothlorien, wargaming specialist, has agreed that Argus Press Software will handle production and marketing of its future titles. Argus was researching the area of wargaming and had intended to release its first games this spring.

An Argus spokesman said: "As we wanted to move into wargaming ourselves, we didn't feel we could do any better than line up with the number one company."

Lothlorien is probably best known for its games Johnny Reb and Redweed. Both war-based games involve you manipulating your armies against the opposition. They

have good graphical layouts, which give added interest.

The company is owned by three partners — Roger Lees, Mike Cohen and Geoff Street — who were all at school together and the company started, like a number of others, by one partner writing a game on the ZX81 computer and selling it through a magazine advert.

Tyrant of Athens was followed by other games on the ZX81 and Lothlorien has moved on to produce games for a number of home machines. The partners claim they have ideas for three new titles each month, so Argus could have its hands full coping with Lothlorien's tactical advance.

## Speak to a star

If you've ever wanted to interview a computer personality Micronet 800 will soon be giving you the chance.

Due to start on Wednesday 20th March, their Prestel-based service will give you the chance

mitted down the line and the interviewee types an answer which is sent back to you.

Other users of the system can read the questions and answers in just the same way CB users can hear other peoples' conversations.

Here's the 'diary' of celebrities hanging on the telephone:

20 March	Michael Feldman	4 Buffs on 4
27 March	Derek Meakin	Database Publications
3 April	Guy Kewney	Computer journalist
10 April	Mike Singleton	Games author
17 April	Paul Duffy	GOSH
24 April	Nazir Jessa	Watford Electronics

to talk to such personalities from the comfort of your own home, using your computer and a modem.

The service will be fully interactive. You type a question on your computer, it's trans-

The sessions will each last an hour, from 7 to 8 pm — when phone calls are at their cheapest.

**Micronet 800, Herbal Hill, London EC1**

## Software Selection New Releases

Firebird is offering a Porsche 924 to the winner of the new game Gyron. Due for release next month, the game deals with the destruction of a computer, not yours — the enemy's!

Claimed to be 'the most demanding game yet for the Spectrum', you will need to combine strategy with timing and manual dexterity. In the Gold series, the game will cost £9.95.

Released on 23rd February, Dukes of Hazzard, from Elite, will try to follow the success of Airwolf. As you might expect, the game centres around the scrapes of Bo and Luke Duke in their General Lee car.

There are nearly 100 animated frames, and the car can be seen jumping and tumbling all over the VDU. The first program will be for the 48K Spectrum.

Other new programs are:

Emerald Isle	Amstrad, C64, BBC, MSX, Spectrum	Level 9	£6.95
ACE	C64	Cascade	£9.95
Xargon Wars	C16	Gremlin	£6.95
Hypercircuit	C64	Alligata	£7.95
Master of the Lamps	C64	Activision	£10.95
The Music Studio	C64	Activision	£14.99
Web Dimension	C64	Activision	£10.99
Pastfinder	C64	Activision	£10.99
Rock 'n' Bolt	C64	Activision	£10.99
Great American			
Cross Country	Activision		£10.99
Road Race			
The Tracer Sanction	C64 disc	Activision	£19.99
Mindshadow	C64 disc	Activision	£19.99
Royal Quest	Spectrum, BBC	Adventure Zone	about £4
Berks	C16, Plus 4	CRL	£6.95
Interdictor Pilot	Amstrad	Supersoft	£17.95

## Computer health

Rumbelows, the electrical retail and television rental company, has begun operating a new service. Called Service Clinic, customers will be able to have electrical appliances repaired very quickly and the service extends to some makes of popular home computers.

There are 40 Service Clinics throughout the country, all of which are purpose built. Customers can either drop their equipment in or have it picked up at their home. Opening hours are 8.30 am to 6 pm.

**Rumbelows, 10 Doughty St, London WC1N 2PL**

## Expand your memory

Commodore 16 and Plus4 users will soon be able to add an extra 64K to their machines.

Micro Component Trading has developed a 64K RAM card which, it is claimed, will be totally compatible with all software which runs on the standard machine.

Another feature of the machine is that it can be fitted without any modifications to the main PCB and even leaves the cartridge port free for other peripherals.

Expected to cost about £60, including post and packaging, it will give users a total of over 60K user memory in test mode and over 48K in high resolution modes.

If you want to know how you use all this extra memory, you'll be pleased to hear that there will be special software developed by other companies, such as Artic, for the system. Just imagine the number of locations you can have in a 60K adventure!

**Micro Component Trading, Fishers Lane, Norwich, Norfolk, NR2 1ET**

NEWS

**Winners, all**

There were seven differences in our New Generation spot the difference competition.

These are the names of the 65 winners who will each receive Shoot the Rapids and Cliff Hanger: Sandra Gough, Mitcham; David Porter, Rochford; Billy Bendon, Leyton; Kevin Whitfield, Haverhill; Lee Russell, London; Chris Whitehead, Bolton; John Cain, Canning Town; K F Hughes, Bristol; Kevin O'Connor, Airdrie; Angus Crowther, Nairn; Darren Marshall, Lewisham; A S Wheeler, Crewton; Adrian Rea, Burnley; Rekoms Filip, Belgium; R G Harris, BFPO 29; D Penaluna, Newcastle; John Flynn, Birmingham; Richard Hirst, Huddersfield; Stuart Preston, Carlisle; Dennis Richards, London; M Ridler, Tamworth; S Eaton, Nottingham; J Kingsbury, St Athan; W Chalk, London; Philip Otton, Exeter; D Roebuck, Lymington; K W Peterson, Grassendale; W Fairbairn, Fort William; W R

Drinkwater, Portsmouth; Wayne Ellis Byrom, Manchester; James Lam, Streatham; Gary Chapman, Barnsley; Mark Pepperrell, Feltham; Karen Rolph, Heaton; Colin Nowell, Manchester; Jason Chapman, Haywards Heath; Robert Anderson, Hebburn; P Marsh, Warlingham; A F Turner-Howe, Basingstoke; P J Ashforth, Hull; Martin Thomas, Swansea; R T Russell, Dagenham; Alan Carnegie, Strathelyde; Angela Scerri, Luton; Ving Chhoy, Birmingham; Linda Cook, Lowestoft; A F Judge, Watford; D P Reynard, Bradford; Joseph Toomey, London; Jonathan Biddle, Leiston; Ian Sweeney, Croydon; S Chua, Birmingham; Robert Stuckey, Bristol; D Rehm, Hampton; Dale Russell, Warminster; Darren White, Whitstable; R K Sisson, Nottingham; Kayvan Moghadam, London; C Crane, Stoke-on-Trent; Stephen Ewer, Suffolk; Paul Wareham, Gerrards Cross; T J Williams, Rushden; Nigel Richmond, Chesterfield; Paul Roberts, Cardiff; Robert Stokes, Eccles.

**Whizz kids '84**

The prizes in the John Menzies Young Programmers of 1984 competition will be awarded this month and will total £15,000-worth of computer equipment. It will be distributed between the winning teams and their schools.

The top three schools are in Suffolk, Falkirk and Nottingham and there are also 20 regional finalists who will receive £250-worth of equipment.

The entrants were asked to write a computer program to

find the missing numbers in a sequence. The computer also had to report what it was doing whilst searching for the answer, so an observer could follow the process.

Robert Black, retail managing director of John Menzies, said: "All the schools taking part obviously put an enormous amount of effort into tackling the problem. It has been very difficult choosing the final winners."

**John Menzies, Hanover Buildings, Rose Street, Edinburgh EH2 2YQ**

**Computer health**

Rumbelows, the electrical retail and television rental company, has begun operating a new service. Called Service Clinic, customers will be able to have electrical appliances repaired very quickly and the service extends to some makes of popular home computers.

There are 40 Service Clinics throughout the country, all of which are purpose built. Customers can either drop their equipment in or have it picked up at their home. Opening hours are 8.30 am to 6 pm.

**Rumbelows, 10 Doughty St, London WC1N 2PL**

**Cheap talk**

Cheetah Marketing's speech output device for the Spectrum — the Sweet Talker — has been reduced in price to £24.95. According to Cheetah, this is in line with the company's policy to provide high quality products at the lowest possible prices.

Cheetah Marketing claims that the Sweet Talker is an elegant implementation of the allophone approach to speech synthesis which provides users with powerful, comprehensive and wide ranging speech output facilities.

The package includes the plug-in module, a comprehensive instruction manual and a demonstration cassette.

**Cheetah Marketing Ltd, 24 Ray St, London EC1R 3DJ**

Albums, sweatshirts and games on offer this week in our Give my Regards to Broad Street competition from

MIND GAMES

# BROADEN YOUR HORIZONS

This week's competition will appeal to everyone — music fans, filmgoers, and, of course, computer games players. There are prizes for everyone too — sweatshirts, records and game cassettes.

The six first prize winners will each receive a sweatshirt, a Give my Regards to Broad Street album by Paul McCartney, and a copy of the game, which is based on the film. The 50 runners-up will each receive a copy of the game for the Spectrum or C64 computers, so even the runners-up prizes are worth nearly £8 each.

Both the film and the game are based around problems which arise when a tape of Paul McCartney's new single goes missing. The master tape was lost and in order to replace it he has to collect all the members of his band and 10 lost chords from around the London streets.

There are 943 screens in all to cover the full map of London, but as the members of the band always use the underground, you aren't likely to meet any of them on the streets. You are dependent upon your trusty souped-up Ford Prefect, your knowledge of the band and their habits and, most of all, your wits.

The game screen is split into four separate areas. The major part shows the map of the streets along which you are travelling. Below, there is information about the character you are chasing, a local scan of the streets and information about the nearest underground stations. You score by collecting notes from the tube stations before your friend emerges.

This is a complex game which, according to Mind Games, requires a good deal of thought and planning besides nimble fingers. If you want to win the game and the other goodies you'll have to brush up on your knowledge of Paul McCartney and the Beatles.

There are six questions to be answered. In most cases they require just a word or two and most of them are names of one kind or another. We can't make it any easier, so have a try, you've nothing to lose.

**Questions**

- 1 Which famous cartoon character starred alongside Paul McCartney in a recent pop video?
- 2 What is the name of Paul McCartney's wife?
- 3 Name the capital city where Broad Street is located?
- 4 Name all four Beatles.
- 5 Where was Paul McCartney born?
- 6 Which female video star and pop singer co-stars in Give my Regards to Broad Street?

**How to enter**

Study the questions carefully and decide on the answers. Most are names of one kind or another, and in most cases just first names will be enough.

Write your answers on the

coupon in the space provided. Fill in the coupon clearly and then write your name and address. Please print clearly in block capitals. We use the coupons to send your prize.

Send your entry to: Broad Street Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date is at first post on Friday 29th March, 1985.

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope.

Prizes will arrive from Argus Press Software within 28 days of the publication of the issue containing the results of the competition.

**The rules**

Entries will not be accepted from employees of Argus Specialist Publications, Argus Press Software Ltd, and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules.

The editor's decision is final and no correspondence will be entered into.

EXCLUSIVE!

## Commodore User

‘However well you do, the game remains exciting, nail biting stuff. ‘In space no one can hear you scream’ the blurb says. My neighbours aren’t so fortunate — I’ve been giving them a hard time. But who needs neighbours with entertainment like this.’

## Personal Computer World

‘The screen display is split into three areas: a map of each of the ship’s three levels; a report monitor which displays the ship’s and crew’s status (who’s next on the Alien’s menu); and a command monitor. The command monitor presents you with the instructions available to you; these can be selected with a joystick. This is a particularly nice feature of the game as it eliminates typing errors.

The Alien you encounter can either be a timid beastly or a blood-curdling monster, and no doubt the intensity of your screams will reflect this.

From beginning to end you’re looking over your shoulder.’

## Games Computing

‘The game follows the track of the film quite closely, with a large number of variations. (If you knew exactly what was going to happen the game would get very boring.)

The game is basically of a strategy type with adventure bits thrown in as well.’

## Your Commodore

‘The novice will require a few attempts to become accustomed with the game but the authors have thoughtfully provided a short scenario option for the space-rookie.

The cassette is accompanied by a booklet giving clear instructions for play and a summary of the film. To appreciate the game’s subtleties, it will help to have seen the movie which would also give the player some idea of what to expect. I hid under my cinema seat first time round — the game is true to the film. Only the bravest players should confront the Alien in the small hours of the morning. I’ll say no more — the hairs on my neck are bristling again.’

## Home Computing Weekly

‘At first I was disappointed as Alien is neither wholly adventure nor arcade, but after playing several times I can say that this game grows on you. The sound effects add to the suspense as does the sudden arrival of the monster.’

ARGUS PRESS SOFTWARE LTD

SPECTRUM 48K

SOFTWARE SOFTWARE

**Sorcery**

This super game, graphically in a class of it's own, has forty different screens.

Aptly described as a fast moving adventure, with the minimal amount of dialogue because there's just not enough time for reading.

The art work involved in POKEing the characters and locations to the screen is phenomenal. These are undoubtedly the best graphics I have seen on any micro, tantamount to being a feast to my cathodic eyes.

Haunting music accompanies the action, in itself a pertinent example of how to extract the full potential from the Amstrad's powerful sound commands. All haunting imagery smacks of artistic skill and imaginative forethought which have gone into the compilation of this unique program.

As in traditional adventures, you have to collect and drop articles along the way. All of this is done graphically, before your very eyes. The smooth fast movements are akin to the concept of cartoon animation and need to be seen to be believed.

Your objective is to release all the sorcerers from captivity within a fixed time limit, whilst avoiding various spooky looking nasties who sap your energy. This game requires fast reactions and dexterity with the joystick.

You will be riveted to your seat right from the opening titles. Instructions and several screen pictures are shown on the elaborate cassette inlay.

Buy this one whilst stocks last! **D.H.**

**Price:** £8.95

**Publisher:** Virgin Games Ltd

**Address:** 61-63 Portobello Rd, London W11 3DD

**Indiana Jones in the Lost Kingdom**

The cassette fast loads so Indiana can pass quickly into the Lost Kingdom. Once there you, or him, are on your own.

Your objective is to work your way through six rooms gaining as many points as possible and retrieve an artefact somewhere within the rooms. How to do this nobody knows. You have to work out the rules and find out how to control Indiana by experimenting.

The cassette inlay card tells you that you can play with one or two players and select one of three skill levels. You also choose where to begin. Naturally I tried skill level one and started in a different room each time.

As you are not supposed to know the rules it's a bit difficult to describe the action without giving anything away. However, action there is. On one screen I eventually realised that I had to dash from one side to the other, jumping on moving platforms and avoiding attacking thingies. Another screen had me avoiding an ever increasing number of bouncing balls while the screen gradually shrunk in size. On one or two occasions I knew what I wanted to do, but couldn't figure out how to from the joystick.

The screens, or rooms were varied and one never knew quite what to expect. The graphics were okay, but the sound became a bit monotonous after a time. You could take a tea break playing this game; pressing the space bar paused the game and pressing f7 resumed the action. This is also useful for those who get out of breath quickly. Generally an average game, a bit pricey, capitalising on the success of the film. **L.C.**

**Price:** £9.95

**Publisher:** Mindscape

**Address:**

**Firebug**

Engine driver, pilot or fireman are all careers young children dream about, but being a fireman often holds first place.

Firebug uses a screen layout similar to Snapper; multi-floors with interconnecting ladders, but with far more happening, three different screens and increasing levels of difficulty with each round.

The game takes place in a petrol warehouse where a firebug is running around lighting fires. The player takes the part of a fireman who has the job of collecting the drums of petrol and dumping them safely into a water tank.

There are fire extinguishers scattered around the complex and the fireman can carry one to put out the fires, but he can't carry drums as well as extinguishers, so you takes your choice.

If the fires are allowed to spread to the drums they explode and raise the temperature in the building by 10°C. If the temperature reaches 100°C the rest of the drums explode and the warehouse fills with fire and smoke to end the game.

There are various dangers to which the fireman is exposed. If he steps on a fire or runs into the firebug he will fall to the ground floor and have to start again, while smoke is yet another danger to avoid.

Instructions are adequate and the game is available on tape or 40/80 disc. There are freeze game and sound on or off options along with provision for joystick control. **J.D.**

**Price:** £9.95

**Publisher:** Acornsoft

**Address:** Betjeman Hse, 104 Hills Rd, Cambridge CB2 1LQ

**Superchess**

In order to test this program fully, I set it up in opposition to Mikro-Gen's Masterchess II on the Spectrum.

Superchess allows you to set up the board to your own requirements, and plays on several levels, each with a different response time varying from pretty instant, to 24 hours! The screen display is very acceptable, with the board viewed from above. Interestingly, when left to it's own devices, each program produced the same opening moves on level 1, though it was on level 3 that I decided to play them against each other. It started out being fun typing their respective moves into each computer...

Masterchess took about 30 seconds to produce it's moves, whilst Superchess produced a move after about three minutes' thinking time, and that is the way it continued. After three hours, I was bored to death. Masterchess on the Spectrum was just as quick, and Superchess was still grinding away. At bedtime, there was no sign of a winner, so I switched off! But one thing was interesting; at one stage Masterchess declared that Superchess had made an illegal move, and it appeared to be right — either that, or it had set it's board out incorrectly.

All the usual features are here; recommended moves, self play, analysis mode and insights as to how the program works. A handy feature for green screen owners is the facility to change screen colours. Acceptable, but rather slow if you want a real challenge. **D.M.**

**Castle of Terror**

If you like graphic adventure games set to spooky music this might be for you.

The cassette comes with three pages of instructions although the precise objective is not given. 'What you do is up to you' says the blurb. As the title page shows a Dracula figure, putting a stake through his heart wouldn't be a bad idea.

The adventure loads quickly and the screen has a hi-resolution picture in the top half with your input and text replies at the bottom. One feature is it's English style input. This adventure allows you to enter 'vocab' to see a list of verbs accepted by the computer. However I don't seem to have the knack of communicating in pidgeon English. When I enter 'Knock on door' the computer responds 'You do not have it' although knock is in the vocab! I therefore tend to have many inane conversations with the computer.

The usual adventure commands are provided, look, inventory, examine etc. In addition you can call up the number of moves you've taken and your score and you can quit and restart the game at any stage.

I think keen adventurers would get several hours of gaming out of Castle of Terror. The graphics are good, there are appropriate sound effects at certain stages and some of the characters are animated.

**Battle for Midway**

Wargaming is a highly respected and long established traditional boardgame. Usually, a real wartime battle is refought, but of course, the outcome can be different. The problem is that you need someone to play with. PSS has the solution here which appears to stick to the traditions of the game, whilst adding the sophistication and facilities of the home micro, and a very devious partner!

Once loaded, the map of the battle zone is shown in multi-colour. On it are shown the American defenders in the shape of two task forces, plus the base on Midway with it's airfield, and two search planes. A large cursor can be moved about the screen and when positioned over a unit, a report on status can be called up. Additionally, if there are planes, they can be launched or landed. On the learning level, some helpful dotted lines show the route of the Japanese.

By moving your cursor and punching keys, you can get your planes to search. When the Japanese are eventually discovered, you can see them indicated. You must then launch your attack... if they don't wipe out your airfield first!

When an attack is launched, the screen displays the scene, and animated aircraft and ships do battle royal. You even join in using your gunsight and joystick! Afterwards you count the cost, and if you happen to have left your planes in the air too long, then it's curtains for them... and probably for you!

Super graphics and sound. Great fun. **D.M.**

**AMSTRAD**

**Alien 8**

It has to be admitted that each game Ultimate brings out is rather special. This is, of course, no exception and really has to be seen to be believed.

It isn't that the games are so original or that they are such good games and cry out to be played again and again.

This game is based upon the popular Knight Lore format and has you moving a small, cute robot in a 3D landscape which is the interior of the space ship. Your mission is to keep the human inhabitants alive during their cryogenic suspension, find and recover the thermolec valves and make sure that all the humans are alive and in the right condition to be able to land the ship.

To stop you there are a host of difficulties, including trap doors, plungers, egg shells, moving floorways and alien guards.

The games lack a little colour: in particular, it would be nice to have the varieties of nasty identified in some colour, however, this formula gives you the extra problem of having to identify the nasties before they get you.

The alien's speed of movement varies with the number of moving objects on the screen, but this doesn't detract from the enjoyment. I was a little disappointed about the instructions, which leave rather too much to be discovered for my liking. Still a winner though. **J.B.**

**SPECTRUM**

**Software Star**

This is the new game from Kevin Toms, designer of Football Manager, and as such follows the same sort of idea. You are given a year to launch and run a successful company.

In your first year your target figure is £10,000 and if you are successful your board of directors will expect even greater things of you. Your job as managing director seems to be a one-man affair. As well as starting new products you also have to sort out launch, advertising and progress whilst dealing with the management of the sales and development. Along with your financial worries it's enough to give you ulcers.

The instructions to the game are adequately set out on the insert to the cassette. Unfortunately it's not a fast loader, so it's a case of setting it loading and having a cup of tea.

Once loaded the graphics consisted of pages of script about the state of play with the occasional graphs. The high-point of these is games chart, where you can watch as your game or games climb and hopefully trigger the No 1 page reach the pinnacle of software stardom. Sound is practically non-existent. Overall the game is fun to play a few times, but not as addictive as the package would have you believe. **M.W.**

**Stockmarket**

A financial game. After an age of loading in the slow mode, the screen clears to show a representation of a terminal screen, complete with an acoustic modem on and through which you receive your financial gen.

You start with £1000, and by careful buying and selling in four types of mining shares — gold, lead, tin and zinc — you can make or lose money as their prices vary on the market. If you run out of cash, you can acquire a limited loan which must be repaid in 10 turns, plus interest at the going rate.

Other forces are at play however, as a rather splendid rendition of a line printer shows at the foot of the screen. Sell a bundle to buy into gold for example, and before you can lay a hand on your shekels, the taxman leaps in and grabs his share.

Up to six players are catered for, and the aim of the game is to make a million first. Playing on your own isn't much fun, and whilst playing with a friend is better, it still isn't wildly exciting.

Perhaps this is a result of a limited number of random forces at play. Once you've had the attentions of the taxman, and watched the market vary, you've about seen the lot. Don't expect a quick result either. We played for over an hour, and in that time I only amassed £655,000 — chance would be a fine thing! **D.M.**

AMSTRAD

**Roland Goes Square Bashing**

This is an absolute gem to which the inlay card with it's dubious spelling doesn't do justice!

Imagine taking one size of Lego tile and using lots of tiles, building up a series of structures by making linked steps and platforms which twist and turn round and upwards. Each succeeding structure is more complex than the next, with turns and holes which are invisible from a viewing angle above and slightly to the side of the construction.

This is what you see on the screen, but in glowing multi-colour and 3D! Using keyboard or joystick, you must guide Roland, who had metamorphosed into a cubic little chap with arms and legs, up from the bottom to the top. Beware, however! Even whilst he is standing on the tile, it begins to decompose, and if you wait a fraction of a second too long, the luckless Roland plunges stylishly down behind the lettering at the foot of the screen to oblivion.

The first few screens are fairly easy, but after about seven, the going gets really tough! You have to be very quick and clever to suss out the best route. At least you can practise, because access to any level is built in, as is a high score routine.

I liked the concept, the graphics and the sound, and found this refreshingly different challenging and addictive. The inlay card and instructions let it down however. They don't describe the game adequately. Highly recommended, though pricey. **D.M.**

AMSTRAD

**Titan**

Titan is a machine code utility/development program of the type generally referred to as a monitor. This allows you to examine code already written either by yourself, or, indeed, by a commercial programmer.

Slightly smaller than 5.5K, Titan can be loaded almost anywhere in RAM allowing you to examine non-relocatable code to be run in the area for which it was written. Once the two are loaded, you activate Titan by a USR call. The display in command mode is of the 'front panel' variety which shows the current state of all the Z80 registers, what they contain, and what the address in memory pointed to by the register, contains. In addition, there are four 'windows' on memory which you can define allowing a constant 'peek' into the areas used by your program. Flags are also displayed.

Instructions for driving the program are contained in the accompanying manual, and a brief run down of the commands is also given on a reference card; a good idea this, since there's nothing more frustrating than to have to dive into a complex manual in order to find a single command. Having said that, this is not really a package for a beginner. You must understand the principles and language associated with Z80 code in order to use it, and be fluent in hexadecimal notation.

Given that, all the usual facilities for disassembly, searching, modifying and single stepping are here, and output can be directed to a full size printer. **D.M.**

SPECTRUM

**Byte Bitten**

Strange name for a game, I thought, until I realised that this is a game about a game.

You play a computer-addicted child who has only one thing in mind, the playing of computer games. In a scenario that is probably just a little too close to real for some families, the young player has first to do chores before being allowed to play the game.

This game is therefore a fusion of two games in one. The first part involves the chores being done and is based around the maze-searching idea. You explore the rooms in a house and have to find the right object to do the chosen task.

Unfortunately the identification of the objects is rather difficult. For example, decorating involves the collection of a picture representing a flower on a roll of paper — at least that's what I guess it is.

If you manage to retrieve the correct object then you are allowed to have a game on the computer. The game concerned is a helicopter shoot-and-kill game. You take off from the aircraft carrier and then destroy as many of the enemy as possible before landing to refuel.

There are a couple of difficulties. Firstly, the radar screen has each helicopter plotted as a single dot and you tend to go a little myopic just looking for them. Secondly you can't change speed to overtake the nasties.

The price forgives all of these problems though. **J.B.**

**SPECTRUM**

**Buggy Blast**

This is one of the best of the blast-everything-in-sight games I have seen for a long time.

What makes the game so remarkable is the quality of the graphics — the most colourful and interesting I have ever come across for the Spectrum.

The story is fairly easy to understand: you are trying to kill 20 of the enemy aliens before your buggy is totally disabled. You have two types of weapon — twin Photon lasers which you control with the keys or the powerful Xion Phaser which we used to call smart bombs in the days gone by. There is a large store of photons for you to use but you've only got 10 Xion Phasers for the entire mission, so don't waste them.

The 3D trench along which you are travelling is reminiscent of Star Wars, but there are a whole range of different types of enemy to combat. Some emerge from side doors, some hover in front of you and some are orbiting above the planet. You are warned of the approach of the orbs as they can be deadly and finish the game if they hit you just once.

The best graphics are shown when you are docked and ready to take off again. The use of colour and flashing is excellent. Sound is used fairly well too and the controls are responsive. The instructions are excellent with plenty of details, but the greatest omission is the joystick option. **J.B.**

price: £5.95

**publisher:** Firebird

**SPECTRUM**

**Know Your Own Psi-Q**

It's only fair to warn you that this review was written by a sceptical, anxious extrovert who shows no evidence of extra-sensory perceptiveness! If you already suspected this, then you may well be interested in this package.

Via a series of questionnaires, your receptiveness to the idea of psychic ability is assessed together with some aspects of your personality. Following this, a second program is loaded which will then give you the opportunity to relax by synchronising a pulse with your heart rate, and displaying some patterns to watch on the screen. The computerised pulse gradually, almost imperceptibly, slows down, and your pulse rate should follow.

You are then ready to take the tests. You may either play guess the playing card, predict the colour, and two grid games where you have to locate either the smiling face or the hidden submarine. You are encouraged to do this 50 times for each option in order to produce a result of some statistical significance. Having done so, an analysis of this significance is given, as is the opportunity to save the results of your test to tape. You are encouraged to use the games often as the accompanying manual assures that practice improves performance.

Though written in BASIC, the standard of programming and screen presentation are excellent, quite a joy to behold, though the patterns used for relaxation are spoiled by attribute problems on the Spectrum's screen.

I don't believe a word of it... but then you know what I'm like... don't you? Pricey! **D.M.**

**SPECTRUM**

**Demons of Topaz**

This addition to the Firebird Gold range is a space epic from down under. It's the ambition of a young Australian space pilot called Ozzy to travel the universe. To achieve this ambition Ozzy must first visit the asteroid Topaz and locate the seven crystals of Topaz. These will provide his old ship with sufficient power to warp it's way from one side of the universe to the other.

Moving around the asteroid's surface causes the screen to scroll sideways in the appropriate direction. Holes are to be found at regular intervals on each level, stepping into one of these allows Ozzy to descend further into the asteroid. There are eight levels in all. When inside the asteroid Ozzy doesn't wear his space suit and so you must keep a close eye on his oxygen level. By returning to the asteroid's surface at regular intervals Ozzy's oxygen supply can be replenished.

The asteroid contains many Manic Miner-style hazards, e.g. dissolving floors and poisonous plants. It also contains the guardians of the crystals, the Demons of Topaz. These nasties don't awaken until you have found the first crystal, but when they do you are in for some fun. Fortunately Ozzy brought along his Trirang, a high-tech development of the boomerang. Skillful use of this device keeps the demons at bay.

For one of the Gold edition titles, I was rather disappointed with the lack of detail in the characters. The animation is sluggish and the musical introduction must have been written by a tone-deaf wallaby. **J.R.**

price: £5.95

**C64**

**The House of Horrors**

The House of Horrors is an elaborate on-screen maze and puzzle game. The screen is laid out with the maze occupying the major portion, a communication window across the bottom, and an illustration/puzzle window top right. At the start, a finely drawn, mysterious looking house is revealed, and the solution to three puzzles allows you inside.

You are then shown as a tiny animated stick man at the entrance to the maze. Using cursor keys or joystick you steer towards the exit, but you're unlikely to get far! Seemingly independent of your location, your path is barred by a number of obstacles. The Egotistical Gorilla demands you spot and remember his name; the Mad Mathematician — aren't they all? — requires some instant arithmetic; the Snake Pit, the finding of a ladder; an unpleasant looking gargoyle sets a version of Hangman, and given the choice of three doors, you're bound to choose the wrong one! There are more, and each time your fail, it's back to the beginning again. This is level 1!

A goulsh monophonic tune accompanies the game, which, with the exception of picture window, uses very small graphics. Visible on the green-screen, they almost disappear using the colour modulator. The major pictures are, however, quite classy.

On tape, the game is saved in normal and speedwrite modes, the first I've seen. Doubly sad therefore to report that the quick version wouldn't load. Overall, only adequate; about the standard of a £1.99 Spectrum game.

**D.M.**

Price: £6.95

Publisher: Solid Software

Address: 35, Melville Rd, Bispham, Blackpool FY2 9JF

**Upper Gumtree**

Richard Shepherd achieved success with Urban Upstart and this game will do his reputation no harm at all. This huge adventure offers a hundred locations, many illustrated in multicolour mode.

The story line is original and most amusing. Professor Blowitovitz, a rather eccentric bloke, has moved into the manor at Upper Gumtree. With him he brings a large number of strange devices. After some time, bizarre things start to happen and finally the mad Professor delivers his ultimatum. Your task is to save the earth from his fiendish machinations. To assist and complicate your task, you encounter sundry people including the helpful Emma and the kelptomaniac Wally.

The standard of programming is very high with rapid graphics routines giving good quality pictures. Raster interrupts are used to give both text and pictures to good effect. The textual descriptions are nice and detailed and better than most I've seen. Many of the accepted techniques are used including a real time element — even the colours of the pictures change as night approaches. The interacting characters have a degree of artificial intelligence

The game is full of amusing problems and interesting ways to die. In all the atmosphere develops well and its easily holds one's interest. To make things less tedious, you can select the speed of printing, and disable the graphics. The parser is quite flexible and allows multiple commands.

Overall this is an excellent game at a very good price, well worth close examination. **M.W.** Price: £6.50

**4 Minute Warning**

I suppose it was inevitable, and here it is — propaganda by software. This is not a political judgement, merely an objective statement. The CND logo features on the loading screen, and the instructions point out that we have the luxury of a four minute warning in the face of the nuclear holocaust.

In the guise of a maze game, you then have four minutes real time to steer your little man about the screen collecting those things needed to survive in your fall-out shelter. Not surprisingly it's difficult, and you fail. You are then confronted by a screen message which makes the assumption you voted for Margaret Thatcher, criticises you for it, then appeals to Reagan not to push the button!

The graphic standard of the game is similarly crude; no provision for joystick, oversensitive response to keys, and jerky movement. I suspect the progma is machine code assisted BASIC. As a game, I found it boring; perhaps the standard of a magazine listing of a year ago in terms of sophistication.

As propaganda it fails too, being far too overt. The best propaganda is subtle, and had the authors wanted to actually achieve something in this respect, the concept would have made an ideal vehicle. Happily, they went over the top, and we can see this for what it is. Which makes me ask, if it's so obvious, who's going to buy it in view of it's shortcomings as a game? Is it just to confirm a political conviction? **D.M.**

price: £5.00

address: 47, Clifton Rd, Newcastle-upon-Tyne NE4 6XH

**Arcadians**

Arcadians was the first Galaxian game released for the BBC many moons ago and it's still the best one around. It has now been converted for the Electron and is as demanding as ever.

Galaxian was the logical progression from space invaders. The ominous cloud of aliens is retained but they are now allowed to indulge in dive bombing tactics. This minor modification to the game increases the level of difficulty ten fold, I wouldn't bother looking for the safety of your shields either, you don't get any in Arcadians.

There are four separate types of alien, each having it's own scoring value. Hit a ship while it's making a bombing run and it's scoring value is doubled. The value of the command ships, which hover above the main squadron, can vary. These ships normally attack in conjunction with two scout ships. Should you take out the two scout ships before destroying the command ship then it is worth a whole 800 points. However, you will need to practise quite a while before being able to pull off that stunt with any regularity.

The system employed to display the score is one of the best I have seen on any game. At all times during combat the player's score and position in the hi-score table is displayed, from position 30 upwards. This adds to the tension as you watch the points click up towards the number one slot.

If an accurate reproduction of a classic arcade game is what you are looking for then Arcadians fits the bill. **J.R.**

C64

SPECTRUM

ELECTRON

**H.E.R.O.**

Now don't ask me what the initials stand for because the character in the game is called Roderick Hero with no full stops! One other point bothers me and that is the screen picture on the packaging: for once I think they are underselling their product because the graphics are amazingly good and don't appear in that block painted fashion that you see on the cover. Is this a first in promotional humility?

The game puts you in control of Roderick who has a prop-pack to hover within underground mines. You have to rescue trapped miners and watch that you don't run out of power.

Armed with dynamite and a microlaser beam attached to your helmet you have to blast your way through walls and kill off any nasty creatures lurking in the depths.

With a little practice, control becomes easier using either a joystick or keyboard. The menu offers the choice of five starting levels so you can miss some of the earlier easy screens.

Points have to be earned but an additional enticement in the instructions says, "The rescue operation is complete when the Hero knows..." Needless to say I haven't got anywhere near that but I'd like to hear from whoever does.

An excellent game that had good graphics, a chance to progress and a great deal of variety — did I mention the lava river and raft? **M.P.**

price: £11.99

**publisher:** Activision

**address:** 15 Harley Hse, Marylebone Rd, Regent Park, London NW1 5HE

MSX

**Beamrider**

This is a very superior space invaders. But I'm a sucker for the zap-'em-up type of entertainment particularly if it's got a touch of novelty.

Activision has created a variety of aliens, nine plus a mother ship, who swoop down at you on a grid. In each sector there are 15 white enemy saucers to obliterate and various others to avoid. Progressing through the sectors makes life increasingly difficult but if you acquire the expertise or simply feel suicidal you can go for the higher levels by choice.

For me the star feature was the sound effects which accompanied the start of each sector as well as the rise and fall of power surging from your main weapon — the laser lariats. Other appropriate sounds were used to create an intense atmosphere which highlighted the action.

The menu at the start offers the game for up to four players. One peculiarity with Activision's games for the MSX, however, is that there is always a keyboard version which is never mentioned in the instructions — I played this one quite successfully using the cursor keys and space bar. Joysticks are therefore optional.

The graphics are excellent and this game is a piece of pure escapism that captivates in more ways than one. Even the grid comes racing down towards you to give that 3D illusion of drawing you into the screen. **M.P.**

**publisher:** Activision

**address:** 15 Harley Hse, Marylebone Rd, Regent Park, London NW1 5HE

MSX

**Battlecars**

Battlecars is a real conundrum. Set in a time in which road travel is so safe, people have resurrected dangerous racers with the added fun of missiles and guns. You have the chance to select or design your car with a host of features all to help you win against the computer or a friend. The process of setting up the game is explained none too clearly in the manual, and ambiguous on-screen prompts don't help much.

Once you have done so, you can select the setting in which you race, circuit, city or autodrome. This is where your problems start, as each is a separate block of code on tape, and no Microdrives to help! A crude and flickery display shows your progress round each of the courses if you can manage to make any. Though keys are assigned for play, there are six for steering and more to control the weapons, no provision is made for joysticks. A small card overlay is provided for keyboard control using twelve keys in all for each car. Even so it's not properly labelled, and won't fit the Spectrum+ or add-on keyboards.

As a result of all this, it's hard to understand, hard to play, and not very rewarding to watch, hence the conundrum. If you are clever enough or old enough to understand how to make this work, then patient enough to practice the very complex controls, will the game be sufficiently satisfying once you get to play it? **D.M.**

price: £7.95

**publisher:** Games Workshop

**address:** 27/29 Sunbeam Rd, London NW10 6JP

SPECTRUM

**Chopper Squad**

An arcade game for the CPC464 featuring the current biggie, the helicopter.

You manoeuvre it round the screen collecting bits of a jet plane, and placing them down in the bottom right hand corner. As you do so, a jet begins to take shape at the top of the screen, and after completing one, you start on the next. The bits float down from the top, often landing on a variety of platforms through which it appears you can fly from below, but land on from above.

Sounds simple? The complication is that there are aliens, a different type and shape for each level, which get in the way. You can, of course blast them away, and when you succeed in making one complete plane, the aliens change and become more attentive.

Sound is adequate: a reasonable engine noise and laser zap, and the graphics are quite inventive, though if you have seen a few of this type of game, you will soon realise that this is the same plot as Jet Pack from Ultimate for the Spectrum. As the Amstrad is a graphically more sophisticated machine you might expect them to be superior, but they aren't quite as good. In my opinion they have neither the detail or the ultra-smooth movement.

The bonus here, however, is the price. At £2.95 cheaper than the Amsoft games this is excellent value for money and thus worthy of a place in your collection. **D.M.**

**address:** Lindon House, The Green, Tadley, Hants

AMSTRAD

**Heroes of Karn**

An adventure game with some graphic illustrations, Heroes of Karn takes you back to a medieval/magical/mystery setting in a mythical land. The sleeve notes make all clear.

You are the stranger who must defeat the hordes of Evil, masterminded by the Powers of Night. Only you can rescue the four Heroes of Karn, returning the land to peace and prosperity. In fact, the sleeve notes go much further in setting the scene in 'mock-gothic' prose. Instructions for playing the game are very detailed, but they don't get you far with your quest!

There are about 10 illustrations to accompany the game. These are revealed the first time you encounter a location, but after that, you must specifically ask for them. They really are quite magnificent; I always worry about quality when I see that a game has been converted from the C64 for the Spectrum, but this conversion is good, not simple line drawings, but real pictures drawn in a trice on the screen.

Thankfully, this is not one of those adventures which kills you off in the first three seconds; you get a chance to explore and collect a few bits and pieces before your troubles start! All in all, challenging, well executed and good value for money.

To discover whether it's the ultimate challenge, you'll have to try it for yourself! **D.M.**

price: £5.50

**address:** Lindon House, The Green, Tadley, Hants

**SPECTRUM**

**Astrocalc**

This is one of an enormous range of programs suited for a variety of computers and is an attempt to give practitioners of astrology the means to make the complicated calculations of relative positions of planets etc at the time of the subject's birth. Other programs in the series will draw the relevant charts and make an analysis, but this confines itself to the calculations on which the interpretation is to be made, and also includes some teaching programs to get the BASIC key words and their meanings stuck in your head.

I'm not qualified to judge the accuracy of the calculations, I must therefore accept them. The standard of user-friendliness is another matter. Considering the claim that these programs are exported, the results are excruciating. Screen prompts are minimal, and if you manage to evade the input error trapping, which is quite easy, the machine crashes. Although the maths is done quickly, the results are squashed up on the screen, in a slightly different form to that exemplified in the detailed accompanying manual. You do have the option to use a printer, though, it would appear, only one which responds to the COPY command.

The level of interpretation based on the manual is very crude and the teaching programs don't really help. All they do is present names of planets and attributes to be learnt, then test you on your learning.

Very expensive, and very crude from a friendliness point of view. **D.M.**

**SPECTRUM**

**Bigtop Barney**

From the name, you may have guessed that this game has a circus theme. Having played it, I had thought that it was completely original. I have it on good authority, however, that it is a copy of an arcade original. That may well be so, but it is an excellent copy.

You control a clown called Barney and must complete four tasks or acts. These can be undertaken in any order and have four different degrees of difficulty.

Task one involves walking along a tight rope and jumping over monkeys or through hoops of fire. Failure to negotiate these loses a life. In task two you must recover balloons from a system of platforms and ladders while avoiding a bouncing ball and the circus strong man. You get about the screen by jumping between levels, using stairs and falling down holes.

Next you must negotiate obstacles whilst riding a unicycle, this screen is essentially the same as the first screen. Finally, you must recover six keys by using trampolines, trapezes and avoiding fire breathers. All screens require accurate timing and patience.

The graphics are simple but highly effective with different scrolling and applauding crowds. The animation of the characters is both amusing and skillful. Four background tunes are used, all well arranged and with a circus flavour — loved the Monty Python piece!

Overall, a fun game which is testing and addictive. At the price this game is good value and is well worth a look. **M.W.**

**address:** Linden House, The Green, Tadley, Hants

**C64**

**Sentinel**

This game is essentially Star Trek but offers furious action, brilliant graphics and sound effects.

You are tasked with protecting the planet Jaraloba from the attacks of the enemy forces of Gorganitor. To this end, you patrol an area of space destroying a number of different types of enemy ships and their Base Stars. Throughout the game, you must nurture your ship's resources and return to your home bases for repair and refueling.

The display gives you the view through the front scanner of your ship. A superb feeling of forward motion is given by the stars and other objects as they zip towards you. The top of the screen gives a constant record of the ship's status. You can review the status of the universe by displaying a Stellar Grid. This gives the current distribution of enemy ships in each quadrant. You also use this grid to move to a specified area.

Combat is depicted by the view of enemy ships coming towards you. You have a set of cross hairs to aim your weapons. The different types of enemy use different tactics and are quite hard to shoot.

There are many other interesting features which I will leave for you to discover. The strength of this game is its excellent use of sound and graphics — not just in odd areas, but throughout the game.

Overall, this is a brilliant game which is absorbing, tough and addictive. At the price, excellent value. **A.W.**

**Paddington's Garden Game**

This game should appeal to Paddington Bear fans and may even cause Paddington to gain a few more.

You move Paddington through a series of gardens catching butterflies. The gardens are in the form of a simple maze made up of flower borders. The flowers are poisonous so Paddington must not touch them. Other things he must not touch are the hedgehogs that run around the gardens and the wasps.

He had three lives to catch as many butterflies as possible. The butterflies have names and at the end of the game they are all released.

The cassette has a fast load feature and the game can be played from keyboard or joystick. When the game has loaded you get some screens of instructions and away you go. Also included is a poster of a garden. I don't think the garden layout on the poster is related to the one in the game although there is a loose resemblance.

I enjoyed playing this. The garden layouts are not too complex but the graphics are nice. Each garden has one or more exits that take you to other gardens and if you're lucky you may come across some marmalade sandwiches which earn bonus points.

The highest score together with the player's name is displayed on the screen so simple competitions can be organised. This is a good value game that should appeal to the younger user. **L.C.**

**Tower of Despair**

It's an adventure folks, with you cast as the Warrior-Mage of Castle Argent, summoned by the Wizards to destroy Malnor the Screaming Shadow — come back mother in law, all is forgiven! No but seriously...

This medieval fantasy is fully created by reading the accompanying manual. The background to the story, the setting and much more are found here. Apparently, Malnor was previously defeated but must again be challenged by the reuniting of the gold and silver gauntlets, only one of which you hold. You must find the holder of the other, then journey to the Tower of Despair and fight it out.

The game, written with the Quill, fills both sides of the tape and sounds very complex. Unlike other adventures, however, you are given a map of the whole area of play. Quilled adventures are, of course, text only — but not this one! A finely designed character set is featured on the screen, but the illustrations are in the form of excellent line drawings in the manual. These merit very close attention as visual clues are to be found here. Not only that, but you actually get plans of the castle in which you start.

Ironically, although all this information is provided, there's still a very tight lipped attitude to the commands and features of the program, so there's still plenty to find out. You do get a chance to get started before dying too! Different and challenging, though not perhaps an adventure for first timers. **D.M.**

SPECTRUM

**D-Day**

D-Day is not so much a game as a simulation. It's complex, and features a map of the battle zones, including disposition of both Allied and German troops and weaponry. It is this map over which the screen window scrolls.

Play against the computer is impossible, you need a friend, and you can choose which of the battle scenarios to use; the landing, breaking out, to Arnhem, Arnhem invasion. Each of these has to be loaded separately from tape, an obvious use for Microdrives, but no provision is made for them. Though you can ask the computer to deploy your troops for you, it's clearly better to sort it out yourself, it does take time however. Via a complex set of cursor keys you can then manipulate your forces according to an overall map which can be called up at any time.

A vast amount of information is available about the different types of troops and weapons, together with their readiness for battle, the type of terrain and so on. Through the computer you must unload trucks, bring supplies ashore, including tanks, fight and fire. Although the manual goes into detail about all this, it's hard to understand, and in places doesn't seem to make sense.

Graphically, although attractive, the screen is crude, but this should not deter the hardened war gamer at which this package appears to be aimed. Certainly not for the arcade freak. A specialist may appreciate it even at this slightly high price. **D.M.**

Extend your vocabulary with six new RSX commands. David Ellis continues his enlightening series on Amstrad programming

# LEARN SOME NEW WORDS

Six more new words this week to add to your growing list of RSX commands.

## UROLL

This word is used to scroll the screen up by eight pixels (one line). The top line will be 'lost' and the bottom line cleared. No parameters are needed for this one.

## DROLL

The exact opposite! The screen will scroll down by eight pixels, with the bottom line being lost and the top line cleared.

Both of these words use the same ROLL routine — available on the jump block — the contents of the B register decide whether the roll is up or down. The words can be used for many purposes. The following example will produce a screen 'judder' — useful for explosion effects in a game:

```
FOR X = 1 TO 20 : IUROLL :  
  IWAIT,5 : IDROLL : I  
  WAIT,5 : NEXT
```

The length and speed of the shake can be changed by altering the values for WAIT AND X.

The next two words ZERO and MOVE deal with changing the contents of RAM. They are both powerful commands, but also very destructive if you are careless in specifying the values.

## ZERO

This will zero the contents of a specified number of RAM locations. The syntax for using ZERO is:

IZERO, number of bytes, start address

For example, to clear the screen memory (which starts at &C000) you would use:

```
IZERO, 16383, &C000
```

Notice how quickly the routine performs. It is the equivalent of POKEing 16383 locations with zero. Compare the speed of doing this in BASIC by:

```
FOR SCREEN = &C000 TO  
&FFFF : POKE SCREEN,0  
: NEXT
```

This is a good example of the difference in speed between machine code and BASIC. ZERO could also be used to clear parts of the screen if required, but it's main purpose was to zero blocks of memory that are going to be used as buffers by various machine code programs or data.

## MOVE

MOVE is a very powerful word. It will copy X number of bytes from one position in memory to another. The syntax for MOVE is:

IMOVE, number of bytes, destination address, source address

Make sure you get the order correct! The source address is where the bytes are that you wish to copy. The destination address is where they are to be copied to. Any errors here are almost certain to corrupt either your BASIC or machine code program or some other part of memory — with dire results!

MOVE can be used to relocate code routines — provided they are 'relocatable'. A machine code routine is relocatable provided that any jumps to within that program are relative jumps (JR) and not absolute jumps (JMP). Always use a JR instead of a JMP if possible as not only is it quicker but the program will then, in most cases, be relocatable. If the screen memory layout of the AMSTRAD was more conventional, then MOVE would be very useful for moving pictures etc on the screen. However, due to the unusual screen layout this is not really on.

Copying the whole screen to memory and recalling it later can be very useful though. This could be done as follows:

```
IMOVE, 16384, 10000, &C000
```

All 16384 bytes of screen memory are copied to locations

10000 to 26383. Be careful that the area you copy to is not being used by a BASIC or machine code program, or by the operating system or else the results will probably be disastrous. Try the above by copying a screen layout. Clear the screen and then enter the following to re-display the original screen:

```
IMOVE, 163384, &C000,  
10000
```

The original picture will be displayed in a fraction of a second. Be careful that the screen offset has not changed though in between saving and recalling the screen. Provided that no screen scrolling has taken place then the offset will be the same. This is much more likely to happen when saving screen dumps on tape and loading them back in at a later date.

As you may have found, the picture is displayed in the wrong position, unless you are very lucky. To help overcome this the following two words will be of great benefit, plus they can be used to produce some very fast scrolling.

To scroll the screen on the AMSTRAD an offset is used. The actual scroll is then performed by hardware — so it is very quick. Two routines are provided in the jumpblock to read and set the offset. They are:

- 1 SCR SET OFFSET (&BC05) — Set the screen offset
- 2 SCR GET LOCATION (&BC0B) — Fetch the offset

These are both used for the following two words:

## OFFSET

This will call the SCR GET LOCATION routine which returns the value of the offset to the HL register pair. This value will then be placed into the variable OFFSET% by using the following syntax:

```
IOFFSET, @ OFFSET%
```

As with LROM and UROM the variable OFFSET% will need to be declared first by using — OFFSET% = 0. This makes sure that an address for the variable is present, which is then used by OFFSET. To complement OFFSET we need a word to set the offset:

**SETOFFSET**

By following this word with the required offset value some very useful screen scrolling can be induced. The syntax for SET-OFFSET is:

ISETOFFSET , value of offset

Try the following to see the effect of changing the offset value:

```
FOR λ = 1 TO 10000 STEP
500 : ISETOFFSET,X : 1
WAIT,100 : NEXT
```

Try changing the values for the offset and WAIT and you will soon realise the potential. If you are saving a screen dump on tape or to memory, then you can now take a note of what the offset value is at the time of saving. This value can then be used to set the offset when the picture is recalled, which should solve the aforementioned problem.

Listings 1 and 2 give the full details of the machine code routines for these six new words.

The LDIR instruction in the MOVE routine deserves a special mention. This is one of those powerful multi-purpose Z80 instructions.

The contents of the memory location addressed by the HL pair are loaded into the memory location addressed by the DE pair. Both DE and HL are then incremented. The BC register pair are then decremented (by 2). If BC does not equal zero then the instruction is repeated. For just two bytes of machine

code this instruction saves much programming — see how many bytes it would take in 6502 machine code to do the same thing!

You should now have quite a few words in your RSX. The BASIC listing (listing 3) will enable you to print out the words in the RSX word table. You can use the program as it is or tag it on to the program which enters the new words.

Next week we start on some LOGO type words to help you get to grips with the Amstrd graphics. Hopefully these will help to save you both time and memory in producing those 'special' pictures.

**Listings 1. Machine code listing for UROLL, DROLL, ZERO, MOVE**

Address	Mnemonic	Op Codes	Comment
&82F0	LD B,1	6 2	<b>UROLL</b> ; load B register with 1 ; call ROLL routine ; return from subroutine

20000 ADDRESS = &7E8C : X = 1 : WHILE XX X0
20010 X = PEEK(ADDRESS) : ADDRESS = ADDRESS + 1
20020 IF XX 128 THEN PRINT CHR$(X); ELSE PRINT CHR$(X-128),
20030 WEND
```

It's your chance to give us your views. You've read the mag, you've typed the programs, now tell us what you think

# OPINION POLL

## HCW Survey

A penny for your thoughts. Not enough? How about a computer game?

Software Projects, the company which brought you Jet Set Willy, is offering one game to each of the first 100 readers whose names are pulled out of the hat. All you have to do is tell us what you think of the new-look HCW.

We like to know what you think of the magazine so we can make sure we provide exactly what you like to read. This is your chance to make the magazine better. Want more programs? Say so. Reviews too long? Make it clear. We don't cover your computer? Tell us. We can only make a better magazine if we keep in touch with you.

Winners who own a Spectrum will receive a copy of Lode Runner, the incredibly flexible ladder and levels game that even allows you to design your own screens. Commodore 64 owners will be sent BC's Quest for Tires, a wacky cartoon adventure where you jump over rocks and holes to save Cute Chick from the Dinosaur.

If you own another computer you will receive a book or cassette from HCW for your machine.

Something for everyone with nothing to lose, except of course your thoughts.

# OPINION POLL

48K SPECTRUM PROGRAM

# PIRATE'S GOLD

**This program by Tim Lang takes you in search of treasure on a desert island**

In this game you play the part of a pirate. Travelling around 10 desert islands you must try to find your treasure.

Each island is different and more difficult than the last. There is a time bonus if you return quickly.

### How it works

- 5 score subroutine
- 10 sets colours and high score, calls title and instructions subroutines
- 15 sets score and level to zero
- 20 prints final score, program loops back to here
- 30-50 call subroutines to print screen, detect adjacent object and print score
- 100-240 main movement loop
- 300 prints a\$ on screen and beeps
- 310-330 prints final score and offers another game
- 500-650 routine to detect adjacent objects and print at bottom of screen
- 1000-1400 initialise and calculate co-ordinates of all objects, prints palms and cacti
- 1900-2160 print title subroutine
- 2140-2160 data from code and UDGs
- 4000-4040 tune subroutine
- 5000-5060 instructions subroutine

### Variables

- sc score
- hs high score
- le level
- p progress flag
- h hunger rating
- i\$ code of key pressed
- x,y co-ordinates of man
- a\$ main array
- b\$ code of object at y,x
- bx,by co-ordinates of gold
- o time bonus
- c\$ holds codes of adjacent object
- s,t used in increase x,y and in screen routine
- l marks sea
- ex,ey co-ordinates of palm trees
- kx,ly co-ordinates of natives
- ix,iy co-ordinates of quicksands
- gx,gy co-ordinates of parrot
- hx,hy co-ordinate of pirate's map
- jx,jy co-ordinate of pirate's spiders
- w UDG value from data statement
- x\$ pitch of notes for tune
- y\$ length of notes

```

# BBC EDUCATIONAL AWARDS

**John Henderson looks at the best and worst of educational software for the BBC, for use at home and in schools**

As the BBC is the most common computer in educational use, this article looks back at the hits of the last twelve months on this machine. It is confined to software available on the home and school market.

#### Best package

Fancy a package that children can use again and again without tiring of the possibilities? Telebook from 4Mation is such a product. It comes with an excellent handbook, plus a set of laminated help cards and eight sample files.

The files show examples of a class magazine, puzzles, stories and illustrations actually created by children. Options within the program allow LOADING and editing of up to 15 pages of text. A manual or automatic paging facility helps the user to remain in control, providing an on-going display of information. Pages can be created in a very short time and storage is simplicity itself.

Not only do you get all this, but disc users have two other programs thrown in — one a disc utility, the other an active search catalogue for all the discs in school. Real value for money.

#### Most original

Whoever thought of the character Podd by Ask deserves to succeed. Imagine an alien

landing on this planet. It can understand some English. You don't know which words, only that there are 120 actions the creature can perform — an instant recipe for magic.

Podd appeals to children aged 3 to 103. Watch as you interrogate Podd — see him run, jump, even try to fly. Ask too many questions and he blushes. Be too demanding and you risk self-destruction as Podd explodes on the spot. Actions can even be made into a short story, as up to five actions can be performed together. Incorrect guesses are greeted by a 'press the space-bar' symbol.

This really is a new venture and the idea is so simple that anyone can use it.

#### Best adventure

Hang on to your hat as you enter the world of L — no not the fiery place, but a mathematical world where numbers take on real meaning. L comes from the Association of Teachers of Mathematics.

The object is to survive long enough on your mathematical wit to beat off the menaces threatening your progress. As with all adventures be careful to carry the correct objects when you need them. Note-making is essential as you try to find the key to unlock the mystery. A really innovative adventure that will keep children thinking — even if it is Maths!

#### Best sound program

In spite of the price, this has to be the Island Logic Music System. The in-built sound facilities on the BBC are very versatile. Add the power of Music System, a real snip at £24.95 and children will become instant composers overnight.

Music System may seem expensive, but it's a real gem. There are five modes of operation. A full editor allows children to create their own notation and alter it where necessary. Keyboard provides a piano-like keyboard for use, and synthesiser allows musical shapes to be created and saved, and printed out.

One innovation is the option of a linker program, where up to 10 music files can be linked together. A collection of sample sounds are also contained in the package.

A must for schools and the home. A real alternative to the recorder and violin.

#### Most changed software

All good software developments should include room for changes. When Factfile was given to schools as part of a freebie package it sent many teachers and children mad. Too many bugs spoiled a useful tool.

Add a new author, a full user guide and Son of Factfile has hit the shelves.

Under the name of Picfile, from Cambridge University

Press, this introductory database comes complete with three sample datafiles, a file copy program, printer file and Picfile itself. This enables datafiles created on the re-vamped Factfile to be displayed as bar charts or scattergrams and greatly increases the versatility of the whole package.

Children can extend their thinking skills and become active interrogators — asking awkward questions comes naturally to them. A further inducement is the availability of Picfile on a seven day trial basis — take the risk.

**Most deplorable program**

Unfortunately this award could take up the whole page as there are so many educationally poor programs vying for your money. I've restricted it to three competitors.

Ginn publishers win on the grounds of having the most expensive boxes in the business. Software seems to automatic-

ally double in this blue packet.

The other two winners are really a parents' guide to evaluation. Any package with the Regional MEP (Microelectronics Educational Programme) symbol on it should be viewed with extreme caution, as should software dealing in ticks and crosses as display features. Early Reading Skills, a hybrid from MEP/ESM falls quickly into this cavern. Beware, you have been warned.

**Best software house**

This was a close run contest, which is surprising. Most producers of educational software can almost self-destruct their own reputations. 4Mation ran a close second. All the material is tested thoroughly in schools before it reaches the shelves and the standard is extremely high. The winner, ASK, is a company which is equally concerned about the children who will use the products.

There is a larger library of programs from which to choose and a consistently high degree of quality within all the products. Not only does ASK market Podd, but other favourites including Facemaker, an easy to use identikit program, and Number Gulper.

**Best simulation**

Archaeology, by Cambridge-shire Software House, is an open-minded simulation straight from the stable which produced Expedition to Saqqara. This program can be used in any location — even your own back garden. Using an 80 x 60 grid, children draw up a site plan from which they, or other explorers, will later excavate. First you enter the walls on up to three levels, then the floor areas, and finally the artifacts. Through an easy to follow menu, children can then explore the site over a period of time. One drawback is the omission of a sample file, but

the documentation sets the scene well.

The possibilities are endless, it could be used to monitor the progress of a reluctant gardener over the years of sweat and toil in the battle with the weed.

**Hit of the year**

This has to be Podd for sheet brilliance. A non-violent, non key-bashing, non-ear piercing program for all the family, and educational to boot.

**The future**

The software scene has changed rapidly over the last year. Over the next 12 months look for two things. First, software that is more open-ended and can be adapted to many situations. Secondly, software that has been tested in schools before marketing. Sensible software houses will advertise the fact.

Happy computing — at home or school. **J.H.**

**FLOWERS OF CRYSTAL**

Two part adventure, introductory dramatised audio story, work sheet, utility, map, superbly-illustrated story booklet, teacher's manual.

*Flowers of Crystal, our No. 1 of 1984, was judged to be certainly original, very well presented, marvellously adaptable and unique in its scope.*

*Educational Computing  
Jan. '85*

**TELE-BOOK**

An extremely flexible menu-driven program which allows 'books' of up to 15 pages of text and graphics to be created on the BBC B micro. Ideal for primary school use.

— THE EDUCATIONAL SOFTWARE EXPERTS

★ VOTED "BEST SOFTWARE HOUSE".

*Home Computing Weekly, March '85*

★ FINALIST "NEWCOMER OF THE YEAR"

*R.I.T.A. Awards January '85*

★ PODD WINS "PROGRAM OF THE YEAR (EDUCATIONAL)"

*C.T.A. Award February '85*

★ PODD VOTED "HIT OF THE YEAR"

*Home Computing Weekly, March '85*

Home Learning Software for 3-14 year olds.

Write for our Superb, Free Full Colour Catalogue to:

**A.S.K., London House, 68 Upper Richmond Road,  
London, SW15 2PP. Tel: 01 874 6046.**

**DEALER ENQUIRIES WELCOME**

#### RETURN FROM PARIS

Fly, drive or hitch – can 003.5 get the secrets home? Use your skills to choose appropriate transport on each stage of the journey.  
BBC Disk only. **£11.95**

#### TREASURE HUNT

Work your way around the map and find the two keys to the treasure. Beware main roads are dangerous. Excellent use of Mode 7 graphics brings map reading skills alive – 2 programs, one uses references, one compass directions.  
BBC **£12.00**      Disk **£14.00**

#### TANK TRACKS

Program a tank to reach its base. Beware of mines and the 'Edge of the World'. Ideal as an introduction to problem solving. Programs consist of three commands – F = forward, L = turn left and R = turn right.  
BBC **£9.95**      Disk **£11.95**

★ ALL THREE ON DISK **£26.00** ★

**EQUATIONS OF LINES:** Demonstrates the graphs produced by equations – type in your own equation and see the graph appear.  
**ED 1** – includes: Think of a Word, Counting On, Pye Charts, Simple Division Each **£6.95**      Disk **£9.00**  
All these programs are used in our school – All were written with the Educational user in mind.

Prices inclusive of postage and packing. VAT not included – add 15%. DISCOUNT – 5% schools. 15% Special Schools.

**SUMMERFIELD SOFTWARE**

Summerfield School 141 Worcester Road,  
Malvern, Worc. WR14 1ET.

BBC/ELECTRON GAME

# DESERT RACE

*The sand's flying in this camel race! Place your money and take your seats for Richard Webb's game*

Place your bet on one of six camels, then watch them race. Each camel has its own odds, which invariably prove true to form.

VDU commands are used to define the camel. Not much sound is included, but you can add your own if you wish.

### How it works

- 1-99 set variables, define characters
- 100-146 GOSUBs to each part of program
- 160-190 prints total, race number
- 200-420 title page, instructions
- 500-680 betting list, camel number, bet
- 700-739 print course
- 740-810 race, checks for winner
- 1000-1530 checks if won, prints winner and total, check for no money

### Variables

- T total (£)
- RC race number
- MV which camel to move
- C1,C2,C3,C4,C5,C6 which camel to move
- OD odds of particular camel
- L1,L2 where to print top and bottom half of camel
- F random number (1-180)
- W winner
- CM camel you are betting on
- BT how much you are betting
- QS play again?

### Conversion

If you want to convert this program to the C64 or VIC-20, you'll need to change all print-tabs and characters.

**GAMER**

This fantastic new magazine appears on March 22 1985 and on the fourth Friday of every month after at the price of 95p.

Each issue will be produced in cooperation with Eecaan our Interplanetary Adviser who on his home planet, Aargon, is a member of the Association of Supreme Players. He will be monitoring developments in the games industry and advising Computer Gamer readers with all their gaming problems. Included in each issue will be pages of review of the latest games releases, special Adventure features and a help-line, invaluable articles on how to 'crack' specific games a high-score page, exciting programs to type in for most of the popular home computers, news, competitions, reviews of peripherals and computers themselves if relevant to the games field and LOTS more.

Also, all readers of Computer Gamer will have the opportunity to join our tremendous Reader's Club — each member will receive a membership card and a regular newsletter which will contain up-to-the-minute news and all sorts of offers on a variety of products.

So all-in-all there's no way you can afford to be left out of the great new revolution in games computing — rush out and buy your copy NOW!

# VENTURES

**This week Peter Sweasey sounds off, and reviews Hellfire from Melbourne House, Scott Adams' Spiderman and Fantasy's Backpackers Guide To The Universe**

Ventures is back, in strong form as always. Step with me into the world of adventures and arcventures (arcade adventures). This week I shall be looking at Hellfire, the Melbourne House game first seen at the PCW show last September: Spiderman, from Scott Adams; and Fantasy's spectacular Backpackers' Guide To The Universe. But first...

**Opinion**

Adventure games are getting stuck in a rut. And if they don't move out fast, they might die away all together.

What do I mean? Well, they're blighted with lack of originality. The number of times I have reviewed games set in far-off lands, where wizards are wise, damsels distressed, dungeons numerous and Urg monsters deadly, is far too many. Even as I write, they are still rolling off the keyboards: Kentilla and Sorcerer Of Claymouge Castle are some recent examples. Some adventure addicts will claim, admittedly with some justification, that each game has it's own subtle differences. But to Joe Public, or even Joe Public's distributor, they all look the same. Which means neither the public nor the shops will buy.

Of course, there are other themes; but these too are clichéd. Outer space, nuclear holocaust, haunted houses, pirates, spy games plus a fair number of time travel games, are all well covered. But little else is released. Why? There are so many possible fields for development — after all, adventures reflect life. Only occasionally — with something like Urban Upstart, Macbeth or Sherlock Holmes — do we really see originality (and look how well they have sold).

If the companies keep churning out the same games, only the very good, like the Level 9 games, or the very well advertised, like Kentilla, will survive. Which is a shame. In this topic, The Quill is both a gift and a curse: it gives

ordinary people the chance to write games, but they all turn out the same!

Arcventures aren't suffering as much since people seem to be more experimental. But even so, there is a limit to how many Manic Miner games the public can stomach.

So, software companies, think original!

**Reviews**

First up, Melbourne House presents an arcventure called Hellfire. Someone once said computer games run in cycles, and so they do, as here we have another Greek game, hot on the feet of Gift From The Gods, by Ocean. As Ulysses, climb the slopes of Mount Olympus, avoiding falling boulders and the deadly Gorgon, outwit the Minators in the Temple of Knossos, and shoot the reptilian assassin and fireball thrower in The Maze. Oh well, at least it isn't as complicated as Gift From The Gods.

My first moan is that the apparent screen shots on the back cover aren't the same as in the game. They appear to have been 'touched-up' with colour, giving a misleading impression. In fact the first screen is almost entirely black and white, rather drab, and resembles an odd Kong game as you bounce up the hillocks.

At once, you notice the lack of sound — there isn't a beep to the game. Things are little better by screen two. Here strategy is important, but once a route is worked out any fun dwindles. The final screen is worse. It can hardly be called a maze: one screen in size, and in large 3D. This task is scandalously simple. Once completed, you return to screen one, which is now harder.

Graphics are reasonable, but the screens take a little while to be drawn. Animation is quite good. In general, this game is a disappointment. It's nowhere near as good as Sir Lancelot, Melbourne House's last offering, yet that was a 16K game. The lack of colour and sound, with only three, although three different, screens, represents a

poor value and boring package. Melbourne House reckons the game should take a week to complete — hardly a value package — and I completed it in two hours. Ventures rating XX — don't buy it! Hellfire costs £6.95 and is available on the 48K Spectrum.

On to adventures. The Hulk was a big seller last year, despite being only average in many reviewers' opinions. Now comes the second in the Questprobe series, written by the famous Scott Adams. This time your skills lie not in turning green — you wear a red costume to swing around an all-American city as web-spinning Spiderman. The tape is well packaged and includes a miniature Marvel comic, which I enjoyed reading!

The point of the game is similar to The Hulk — mainly collecting gems, and trying to find out more about the mysterious overseer of the series, The Chief Examiner. Out to stop you are a large number of distinctly nasty adversaries, like Hydroman and The Lizard. Strangely, these villains all appear to have been deformed accidentally by various scientific experiments, which does not say much for American life! Another task is to work out how to manufacture your web. Graphics are, as usual, the best in the business.

Spiderman is a lot more fun than The Hulk. There is more to do, and there are more locations to do it in. The vocabulary is more friendly: now it accepts THEN, commas, full sentences and DROP ALL. The characters will talk to you, and presentation is good. The problems are more imaginative.

I enjoyed this game a lot. Maybe I just preferred leaping up walls to ripping open my shirt! I also liked the range of difficulty in the problems. The player can get just far enough to maintain his interest. Ventures rating: XXXX. Graphics versions are available at £9.95 for the Spectrum and Commodore, text only costs £7.95 for the other popular brands. Be warned, text is sparse.

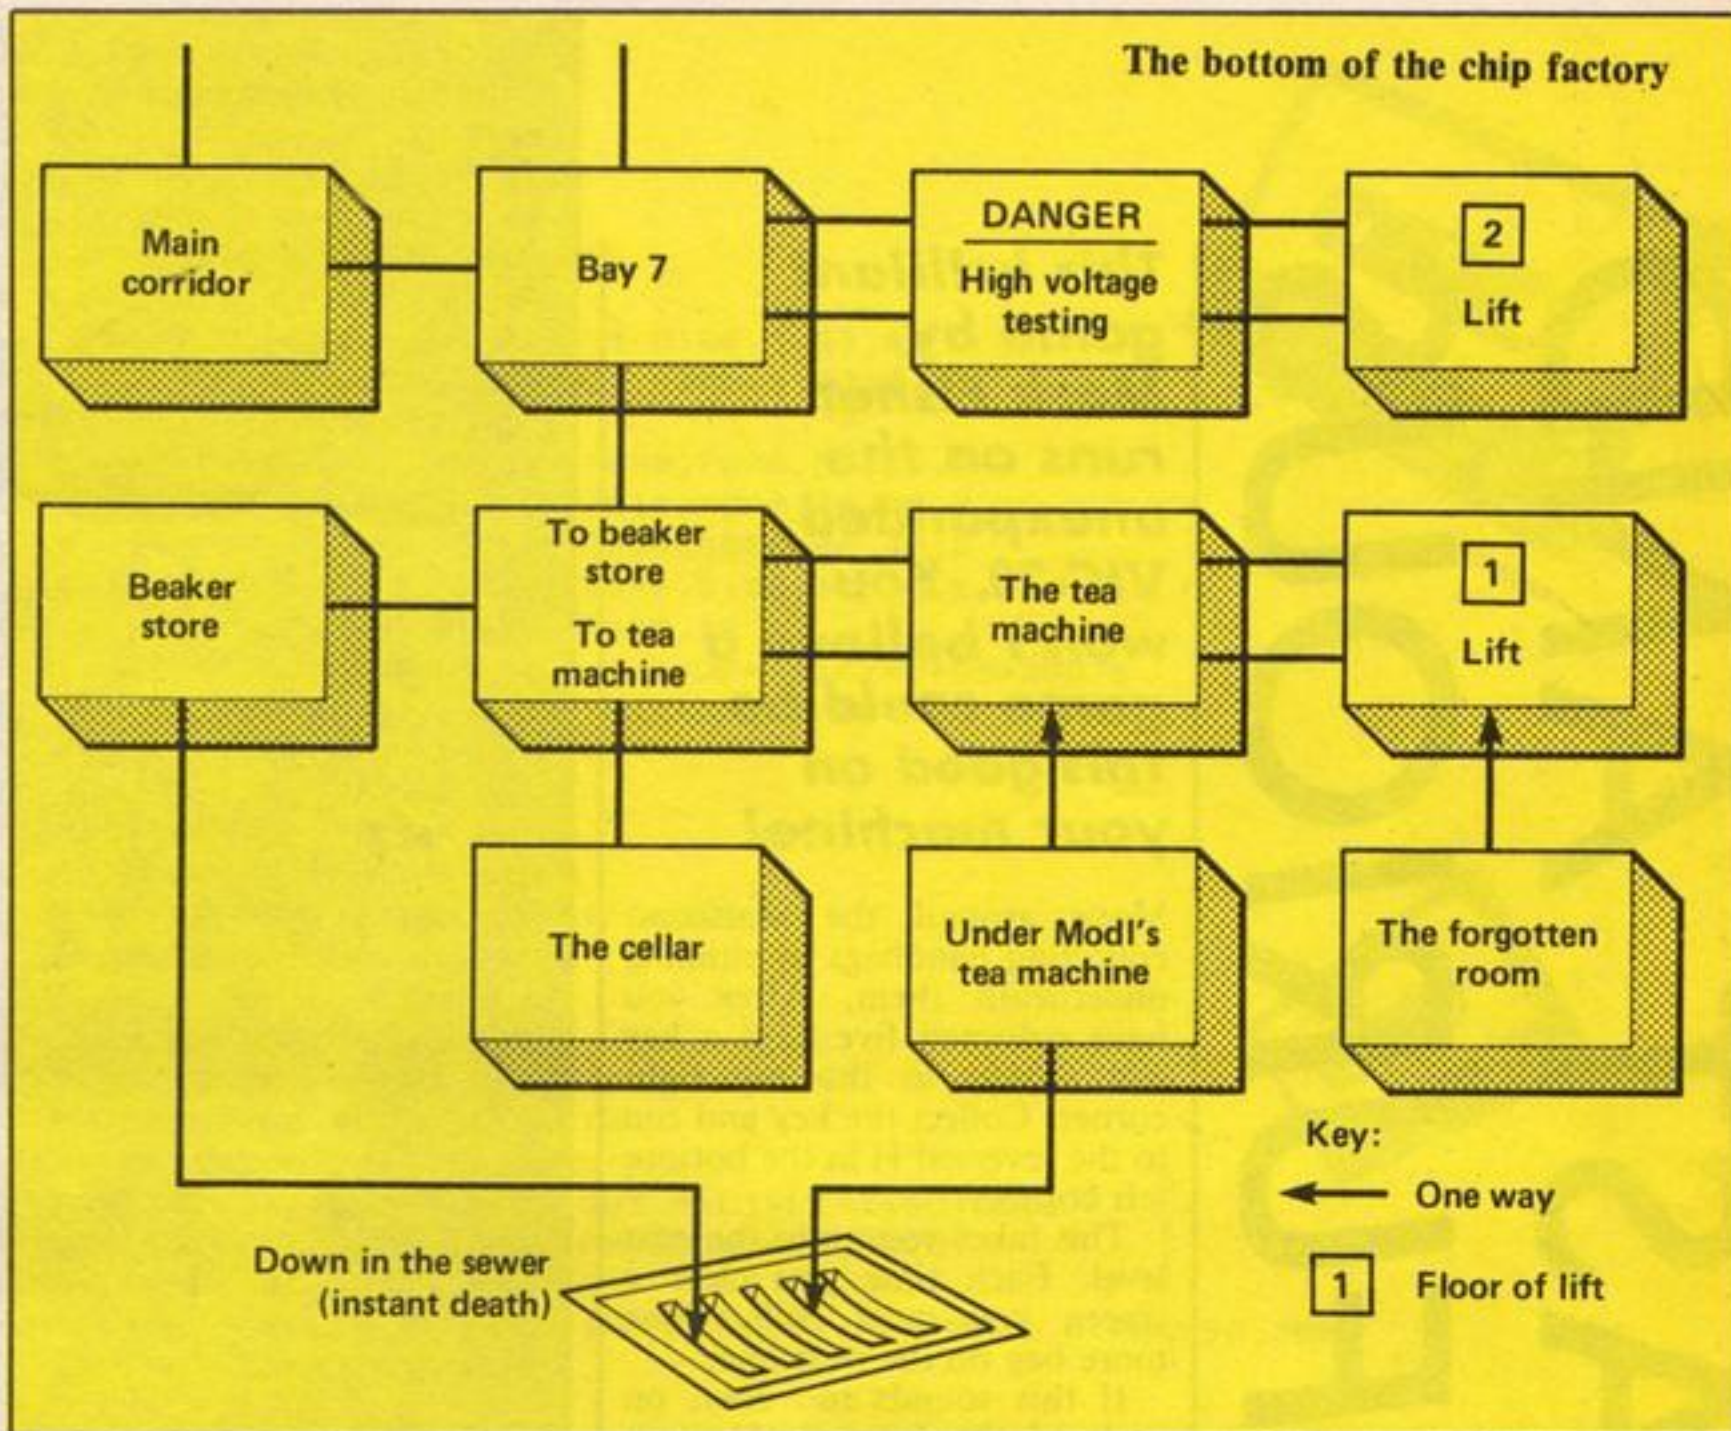

I have one query. Marvel seems to be using up the best known characters first. After the Fantastic Four, who are next, who can they use? Disturbing thoughts, particularly as this is a series of 12...

Finally, a slightly late look at The Backpackers' Guide To The Universe, from Fantasy. As super-hero Ziggy, you discover that the infinitely evil Scarthax has given just 24 hours' notice before he pulls the **Great plug**, whereupon the whole of the universe will flow down the plughole.

To save reality, you decide help is needed, so you visit the Caverns Of Exile. Here, a variety of odd and, to be honest, slightly obnoxious, aliens are held in cages, for their own good, or everyone else's. You enter the Caverns to find them, carrying a backpack which will hold a seemingly infinite number of objects.

The problem is, once the creatures are in the pack, you have to keep them alive. This is not just a case of finding food — oh no. The Double-Headed Emu of Quark, for example, is severely schizophrenic, and requires a book of Zilurian love poems, so that one of it's heads can read the more angry one to sleep! This and other vital information can be found on the Backpackers' Guide To The Universe, which is on side one of the cassette. On side two is the game...

In practice, it is fun to play.

The graphics are extremely attractive and smooth, and colour expertly used. There are wraiths to be shot, but they are not as interesting as most Fantasy aliens and tend to hinder your progress, rather than supply a challenge. Backpacking around, trying to find which objects suit which creatures, is a daunting task, but fun.

Again, this game has no sound. Backpackers' Guide is a

very complex arcventure. It is perhaps a bit too complex, and quite pricey, at £7.50. Also, it lacks the action content of, say, Pyjamarama. In all, a Ventures rating of XXX — interesting but a bit boring. I have high hopes for the second of this trilogy. Incidentally, I'll be reviewing another Fantasy game, Drive In, next week.

**The Map**

Here is part one of our map of

Hewson's excellent Technician Ted. This section stems out from The Main Corridor, as seen on the inlay card. I would be interested to see any of your maps, and the next part of this will be next time, which will also include a list of tasks to follow the first three.

Back next time with a bumper helpline, more of the map, and reviews of Drive In, Macbeth, Pitfall II and more. Happy venturing!

VIC-20 PROGRAM

# FAST AND FURIOUS

**This brilliant game by Mark Fisher runs on the unexpanded VIC-20. You won't believe a game could be this good on your machine!**

Move around the platforms collecting handbags by running underneath them. After you have collected five bags a key will appear in the top right corner. Collect the key and run to the reversed H in the bottom left corner.

This takes you on to the next level. Each time you clear a screen you must collect one more bag on the next one.

If this sounds too easy, on each of the four platforms a monster is patrolling. It's touch is fatal.

You have 40 seconds and three lives to complete your task. You win 20 points for each bag and 50 points for the key.

Use key **A** to go left, **L** for right, **P** for up and **Z** for down. Load the game in two parts. The first part is the data for the new character set and the characters for the game.

Once you have loaded and run this, the micro news itself. It gives you the prompt to load part two, which you should then run.

**Variables**

M1, M2, M3, M4 position of monsters one to four  
 C2%, C3%, C4% trail monster leaves behind  
 C2, C3, C4 colour of monster's trail

C64 PROGRAM

# LET'S TWIST AGAIN

**This pontoon program by P J Cockerton means you can gamble without losing money**

This is a Pontoon program which has all the features of the original including aces high or low and five card tricks.

After the title page you are given £100 and you must bet on every game you play. When you have placed your bet the reverse sides of two playing cards are shown: top left is your card and bottom left belongs to the computer.

You must keep taking an extra card by pressing T — twist — until the sum of your cards adds up to 21, or as near to that figure as you can get. If the total exceeds 21 then you bust. Once you press S — stick — then it is the computer's turn.

The game uses full size playing cards which are fanned out so you can see all your cards at once.

### Variables

CS card outlines  
 BKS pattern on reverse of cards  
 AXS, BZS, CZS, DZS, EZS, FZS, KKS card positioning strings  
 C random card numbers  
 SC addition of cards  
 A number of aces in hand  
 Y number of games won  
 ME games won by computer

P1 sum total of cards  
 C1-C9, D1-D9 stop random card numbers appearing twice  
 AS used to read data  
 SY card symbols  
 T1 positioning of symbols  
 BR black or red symbols  
 G your turn, computer's turn  
 XL send to title page only at start of new game  
 CO colour memory map locations  
 VO volume control  
 WF wave form  
 AD attack and delay  
 HI high frequency  
 LO low frequency  
 SR sustain and release  
 Q five card trick

### How it works

30-80 set up string variables  
 110 sets up screen for play  
 215 gets random card number  
 216 gets random symbols  
 220-261 POKEs card number and symbols onto screen  
 269-272 prints picture cards  
 287-295 win, bust, etc. routines  
 2500-2600 status page information  
 3000-3020 check random cards only appear once in game  
 4000-4010 symbols for picture card  
 5000-5030 card flick sound effect  
 6000-6020 3D pontoon display  
 8000 title page routine

**Thumbs up**

I would like to thank you for all the support you are giving the Oric Atmos.

It may not be a very popular computer, but you are helping us Atmos owners gain more security in them.

Keep up the good work.

**Daire Woods, Donegal Town**

**Look before you leap**

While I congratulate Phil Abel on his calendar program for the C64 (HCW 95), here's a message for all C64 users who have been 'astonishing their friends' by telling them that the Battle of Trafalgar was fought on a Sunday: it wasn't!

The 21st of October 1805 was a Monday! Phil has accounted for leap years in line numbers 80 and 100 by dividing by four, and normally every century year (1800, 1900 etc) would be a leap year by that method, but to further compensate for the error in the solar year, only century years divisible by 400 are leap years (i.e. 1600, 2000 etc).

The year 1900, for example, was not a leap year, hence the error in the day of the battle above.

The correction is simple, although it adds considerably to the process time of the main routine.

Change:

90 DA = 2 (not 7)

Add:

```
85 IF (YE/100) - INT(YE/100) = 0 AND (YE/400) - INT(YE/400) X X 0 THEN MO(2) = 28
105 IF (A/100) - INT(A/100) = 0 AND (A/400) - INT(A/400) X X 0 THEN 120
```

**Jan Andrews, Portsmouth**

**Thumbs up to Amstrad**

I am the owner of an Amstrad CPC464. Each week I buy Home Computing Weekly magazine and I think it is a very good computer magazine. In HCW 96, on the letters page I saw an item mentioning that programming articles would appear shortly.

I have now seen some of these and I am very pleased with them.

Could I please have a list of all Amstrad CPC464 tapes on the market?

**Pascal Sendron, Ballineen**

*If you want to know about software for the Amstrad then Amsoft is the best firm to contact at Brentwood Hse, 1/7 Garman Rd, Tottenham, London N17*

**You're biased!**

Every time I turn to the letters page of HCW, I look to see if there are any complaints directly concerning the reviews of games or what people thought of the magazine as a whole etc.

It seems, although I am sure many readers write in to complain, HCW only published what suited it. HCW publishes a lot of letters which make it look good, such as the letter entitled Plea from the heart, in HCW 98.

This letter went on to say 'how good the mag is'. I will be extremely surprised when a letter such as I have described is published.

**R Kavanagh, Scotland**

*Well, here it is, and we do publish critical as well as flattering letters. Constructive criticism is what we're really after.*

**Let's have some peace**

Like J Hughes of Manchester, I also own a 16K Spectrum with Cheetah upgrade. Now before all you readers jump up and down on your magazines, shouting: 'Oh no! Not another pocket calculator owner', just read what I have to say.

I do wish people would stop telling others that they should have bought a Commodore instead of a Texas or a BBC instead of a Jupiter Ace. People bought their own computers for their own reasons and the last thing they need is people telling them they should have bought something else instead.

There's a choice on the market, so let people make their choice; after all, just think how boring it would be if there was only one computer on the market.

I have just received an

AGF protocol joystick interface for my rubber-computer and was going to get a Wico three-way joystick to go with it. Unfortunately, the three-way has two independent fire buttons and AGF says that you shouldn't use joysticks with two independent firing actions because they don't comply with industry standards and may damage the computer.

Surely if this joystick was designed to be used directly with the Commodore and Atari sockets, then it shouldn't do any harm to a Spectrum if you're using an interface.

Could you please tell me if it's safe to use a three-way Wico stick, because I've put off buying any joystick until I find out.

**Dave Brown, Winchester**

*The answer is no, it isn't safe. You risk short-circuiting your computer, so don't try it.*

**Four points to watch**

I feel I must write to draw your attention to a few niggly points which let down an otherwise excellent mag.

Firstly when reading your letters pages I find that about 30 per cent of the letters have the same format, i.e. the reader asks for more reviews/listings and you reply with the standard reply (and rightly so) that you are only reflecting the state of the market. In my opinion one such letter with the appropriate reply would suffice each week.

Secondly, still on the

subject of letters: sometimes I see readers asking for help with various problems (number 98 for example has two such letters) but you never give the readers' full address so that other readers including me can help them out. Why is this?

Thirdly, I find your star ratings on some of your software reviews a bit contradictory. A review for a certain piece of software can have equal or higher percentages in each of the four categories than another piece of software and yet have a lower star rating. Is the star rating a choice of the individual reviewer? If so, then I can't see the point of

having star ratings if they can't be used to make comparisons.

Finally the last point I must make is that practically every issue of your magazine contains one of those infuriatingly frustrating reviews with either no software house name, address, or worse still, you don't say which machine it is for.

I'm sure that if these points were cleaned up a lot more people would sleep at night. Otherwise keep up the good work, on an otherwise great mag.

**Phill Cotterill, Birmingham**

**More for C16, please**

I am a C16 owner and proud of it. But that's not why I've written in.

Since the C16 is new there's new software for it, so please could you put in programs and maybe some reviews too. Don't say it depends on the state of the market — I know that. But surely it's not much of a task to pop in the odd one or two.

**Martin Johnston, Glasgow**

Firstly, we publish your letters, so it's up to you as the readers to send us your letters. If you're not pleased with the standard of other readers' letters, write in your more original comments and we'll make sure to publish them.

Secondly, we prefer readers to write into us with answers, so that we can publish your replies on our letters page. Of course, if you want to write directly to certain readers, we can forward your letters to them.

Thirdly, star ratings are left to the reviewer's discretion, but we do try to keep them standard. Our reviewing system will be changing from our March 5 issue, and we hope that it will be easily understandable.

Finally, sorry! If software houses don't provide us with the full information sometimes, we are forced to sacrifice some small details if we want to feature their review as soon as we can. We'll try not to do it again!

**Bald and fingerless**

I've just finished reading the latest Ventures article. Reviews of adventures are interesting, but not when they've been around a while. The three you reviewed have been done before, quite a while ago in fact. How about good new adventures? There must be some!

I did agree with your Scott Adams review. I had Adventureland for Christmas: keep me happy for ages, thinks I. It was finished before I went back to work. Very disappointing.

Level 9 produces the only adventures I've ever bought which really hold interest, I've done Snowball and

Lords of Time, admittedly with a sneaky peak at a help sheet, and am currently cursing Colossal. (What is the magic word?) I refuse to cheat on this one — well, not much anyway. Please, hint on that word?

Can't say I consider adventures as adventures at all. That doesn't mean I dislike them, I just don't consider they're adventures. Still, it takes all sorts!

Keep the tips flowing.

**Liz Tomlinson, Havant**

P.S. Before I'm the only bald-headed, finger-chewed mum in town, what is that magic word?

**IT'S FOR THE 48K SPECTRUM**

- It's available from April the 2nd
- It's only £6.90 inc. V.A.T.
- It's got over 100 screens
- It's available from all good computer stores
- It's also available direct from A n F Software
- It's eggxactly what you've been waiting for

WOODBINE ST EAST, ROCHDALE, LANCs O4165LB Tel:(0706) 341111**

## HCW needs you

Have you ever looked at the articles and programs in HCW and thought you could have written that?

Why not try? We welcome submissions from readers and are always interested in your ideas and suggestions.

Submissions tend to fall into one of three categories...

**Programs** are always supplied on cassette and are accompanied by full details of the program variables. Please type these details double-spaced. Listings are helpful, but not essential. What is vital is that the programs should be completely error free, so please double check.

**Articles** on certain aspects of using home computers should be no longer than 1000 words. Try to keep to the style you see in HCW and include programming examples where they will help the reader understand the subject. We will convert your sketched illustrations into final artwork.

We also use **short tips**, articles and **brief programming routines**. Any discoveries you have made about your machine might be of interest to other readers.

All contributions are acknowledged and those accepted for publication are paid for at competitive rates. The copyright in such work will pass to Argus Specialist Publications Ltd. Keep a copy of your work and include a telephone number and an SAE. Please label everything clearly with your name and the machine concerned.

All contributions should be sent to:

Submissions  
Home Computing Weekly

Liz Graham spoke to Eddie Kidd, star of Martech's Jump Challenge. Read about the thrills and spills of being a motorbike superstar

# EDDIE KIDD — ACE STUNT RIDER

Eddie Kidd is still going strong after 10 years performing motorbike stunts, and if you've had a go at Martech's Eddie Kidd Jump Challenge, you'll have begun to understand some of the hazards and problems he has to face when going for a record jump.

Eddie was involved in the setting up of Martech's game, and he acted as advisor on some of the technical aspects. He explained what can go wrong — and this is real life, not just on a computer screen.

'One big problem is head winds, which you have to cope with,' he said. 'You also have to sit correctly and have your balance just right.'

He went on: 'If you sit too far forward the bike will dip and you'll crash. On the other hand, if you sit too far back, the bike tips up and you go over.'

These aspects are reflected in Martech's game, although the element of risk isn't a fraction of the dangers Eddie faces each

time he jumps. Eddie's next big jump is at Carlisle, on March 17, and he's in intensive training for the event.

'I work out at the gym every other day,' he explained. 'I also go swimming, run and cycle 20 miles every Sunday. I've got a special diet which I'm supposed to follow, but I haven't been sticking to it religiously.'

The jump in Carlisle over the River Eden is a tricky one: 'It's the worst one yet,' Eddie said. 'The run-up's particularly difficult.'

Eddie Kidd has been a professional motorbike stunt rider since he was 15. He's also been involved in several films, and is now branching out into the world of pop.

'I'm writing some songs with a friend, and I've already made one record called Reggae Man, which has been released in Sweden. I'm looking to set up a deal with a record company over here — I used to be with Decca Records.'

Riding High is the film in which Eddie did his own stunts; it wasn't a box office smash, but is doing well on video. He also starred in Hanover Street, with Harrison Ford and Christopher Plummer, as well as playing a part in Top Secret.

Eddie owns a BBC computer, and he plays his own game on it, as well as Gold Mine. 'I've had it since Christmas, and I must admit I do like playing my own game on it,' he confessed. 'I've scored 39, but then I do have quite a lot of experience!'

He explained how to judge the speed of the bike: 'I use the fuel and the gears, and from that I can estimate how fast I'm going. I know, from my own experience, that it takes 100 yards run-up to jump 10 cars. But on the game, you have to guess, because otherwise it would be far too easy.'

You can improve your score on Eddie Kidd's Jump Challenge through trial and error, and learning from the results. Eddie has seen the versions for the other machines, and he likes the Commodore 64 one best.

'It's got some nice little touches. You can move the man, and make him stand on the saddle. There are some witty sayings when he ends up in hospital, as well.'

'The Spectrum version is very difficult — it's the hardest one,' he went on. 'Martech is holding a competition, and each month a player wins a video. The winning scores on the Spectrum are much lower — if you manage 25, that's really going some, while on the BBC, scores of 33 have won.'

As a skilled motorbike rider, Eddie finds it frustrating to have to go back to the beginning and start again on a BMX bike. He thinks that's a bit unfair, and prefers to keep on trying with motorbikes, rather than go back to pedal power.

And future plans on the software front include a planned follow-up with Martech. Eddie is having talks with the company, but it's all under wraps at this stage.

If you'd like to see Eddie Kidd in the flesh, go along to the opening of the motorbike fair at the River Eden, in Carlisle on March 17. No doubt it will make you realise how much safer and down to earth the computer game is, compared to the real thing!

PERIPHERAL

**Fingers on the fire button — here's a review of Gun Shot and Vulcan joystick interfaces**

**Gun Shot  
Atari connector £8.95**

Vulcan Electronics, 200 Brent St, Hendon, London NW4

If your computer has an Atari-style joystick connector, then this stick will work with your machine.

It is an extremely well built and rigged stick with the now familiar gun-style handle. This is fairly comfortable to hold, even over quite long playing sessions, but there isn't really any alternative hold possible. With the ball-type sticks there are a variety of possible holds so that you never get cramp.

The stick is very positive indeed in all four main directions and the diagonal directions register well too. With its strong leaf switches this is one stick which is likely to survive even the hardest of games for a long time.

The stick I used wasn't the rapid fire version, but there is one available. The fire buttons are both well located and positive in reaction.

The four sucker pads on the base give good adhesion, but they are in the way if you prefer to play with the stick hand-held. This is of particular importance if you use the lower fire button a great deal.

The price of this stick is right and I will be using it for a number of alien bashing sessions in the days and months to come. **J.B.**

**Vulcan joystick interfaces  
BBC B and Electron  
£12/£19.95**

Vulcan Electronics, 200 Brent St, Hendon, London NW4

Joystick interfaces might seem common place to those who have machines with the joystick facility built in, but they can make a vast difference to those using computers without the facility.

These are both simple plug in connection boxes but both add facilities which the avid games

Vulcan's Gun Shot...

JOYSTICKS AND INTERFACES

player is likely to want.

The Electron interface is fixed to the rear expansion connector and can't be inserted the wrong way round due to the use of a keyway. There are two problems inherent in this type of product. Firstly, once connected there are no further expansion possibilities available and secondly there is no support for the case from the machine itself.

However, there are no problems with the interface's operation once connected and the tapes supplied are likely to give you full control over most games.

The BBC already has an interface as standard, but this version allows you to use the excellent range of Atari style joysticks including those with rapid fire features. The tape supplied with this interface has versions for those games which require ADVAL conversions too. There is a switch on the top to allow you to select the horizontal direction as a number of BBC games are non-standard.

Both products are well-built and should give a good lifetime's use: particularly noteworthy are the metal connectors on the BBC version. **J.B.**

...and joystick interfaces

Week Ending February 26, 1985

No real changes in the top three but a real surprise at number four this week.

Yes, Football Manager is still there and to prove the point it keeps bobbing up and down the charts like a yoyo.

New entries below number twenty are very few this week, just two. Wally Weeks' new adventure, Everyone's a Wally, has come in at number 30 to make it two from Micro-Gen, Pyjamarama still holding on to 15. It all goes to prove that you can't keep a good Wally down.

The other new entry is from Anirog, Slap Shot. Based on the game of Ice Hockey this is yet another game to play on the cold evenings when you can't be bothered to get out of the armchair.

The only other new chart entry is in the C64 chart, Lords of Midnight from Beyond. It looks quite settled at the moment, but judging from the amount of software arriving on our desks this could all change soon.

## For Hire

### ORIC, ATMOS, COMMODORE 64, LYNX SOFTWARE LIBRARY

Over 150 Oric and 200 Commodore 64 titles.  
Stamp for details:-  
**Les Wilson 100 Blenheim Walk, Corby, Northants.**

To hire a computer from Spectrum 48K upwards, please phone or write to Business & Computer Services, 294a, Caledonian Rd., London N1 1BA Tel. 01 607 0157

### SPECTRUM SOFTWARE HIRE FREE MEMBERSHIP

All top titles, for hire details send S.A.E. to:-  
**S.S.H. (HCW), 21 Chaceley Way, Wilford, Nottingham NG11 7EG**

Spectrum tape library games, utilities, for details S.A.E. 'Soft by Post' 14, Blakeley Avenue, Wolverhampton. Free membership.

### WIN A COLOUR T.V.

Spectrum - Oric - Atmos - QL Software Library  
FREE MEMBERSHIP —  
FREE ENTRY TO DRAW  
S.A.E. FOR DETAILS TO:-  
**HIRE SOFT, 113 BROOMFIELD RD, MARSH, HUDDERSFIELD (state micro)**

## For Sale

Commodore VIC 1525 graphic printer. Slight use. £100 o.n.o. Contact Mr P Knowles, Reading (0734) 761094 after 5pm. Suitable for CBM 64/VIC-20.

## Hardware

### CBM 64 VIC-20 TAPE TRANSFER — DUAL CASSETTE INTERFACE

It is quick and easy to transfer any cassette program with TRIGSOFT's DCL 1 interface. Duplicates all turbos, m/code, data files etc. If a program can be loaded it will be transferred exactly on a second datasette. Send £10.00 inc p&p to: **Trigsoft, Marshfield House, 4 Burnett Place, Bradford BD5 9LX** 7 day money back guarantee If not 100% satisfied

**BOOK THIS SPACE NOW!**  
RING 01-437-0699

For sale. Apple IIC, Apple IIC monitor £89, Kaga monitor £76, plus extras, all unused, boxed as new, with full guarantee. Ring Nigel 0203 503042

## Libraries

**BBC B/Electron/Dragon** software library — Membership £5.00. — Tapes 1 (+30p P&P). Stamp for details. E. Tucker, (H) 58, Blenheim Walk, Corby, Northants.

## Software

**Computer Diary** (prog) for Amstrad. Password security. £3.99. G Williams, Pine End House, Lower Row, Golden Hill, Pembroke SA71 4TG

## Software Educational

Help with your A-Level Physics! Improve your grades with examination revision program by former university lecturer. 48K Spectrum version £5.95. Cheques/POs to: Dr J C Hughes, 50 Leach Lane, St Helens, Merseyside WA9 4PU

**ADVERTISE IN OUR NATIONWIDE GUIDE AND SEE YOUR BUSINESS GROW.**

## WD Software For the QL:—

**Utilities (3rd ed)** (base £5.50)  
View 60-file DIRECTORY on one screen, one-key LOAD, COPY or print 60 files with one key (allows for namesakes). Multiple FORMATTING to prevent corruption by stretching of tape. TOOLKIT to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETES a file). Full instructions in QUILL file. Use up to 6 EXTRA MICRODRIVES (add on your Spectrum ones!)

**WD Utilities for QL discs** (£10 on disc) (base £4)

**WD Morse Tutor** (base £1)  
Specification as for Spectrum, but no speech (hurry up, Currah!)

**Ref QL (1st ed)** (base £1)  
100+ useful QL references in an ARCHIVE file.

## For the 48K Spectrum:—

**WD Morse Tutor** (base £4)  
From absolute beginner to beyond RYA and Amateur Radio receiving. Adjustable pitch. Set speed to your test level (4-19 wpm). Learn code with single characters, progress from groups with wide inter-character spaces to random sentences; decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer or LISTEN to phonetic TALKBACK from Currah MicroSpeech if fitted. Also own message, random figures, letters or mixed. 16K version on special request (no speech, only 5 sentences instead of 100).

**Tradewind** (base £4 — was £5!)  
Sailing/trading strategy game with graphic surprises.

# DON'T VAT THE PRESS

There are strong reasons to believe the Chancellor of the Exchequer is planning to impose VAT on your magazine.

Such a move would turn the clock back 130 years — the last tax on newspapers and journals was repealed in 1855. Since then 'No tax on knowledge' has been a principle agreed by all Governments, even in the darkest days of war.

A free Press is a tax-free Press.  
No Government should be given the power to impose financial pressure on a Press it may not like.

Tell your MP to say 'NO' to any tax on reading.

Issued by the Periodical Publishers Association, London

## POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available — 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture — choose as many selections as you need for your bet. The precise prediction formula can be set by the user — you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation.

(This seasons results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+ 16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc

PRICE £15.00 (all inclusive)

Boxed, with detailed instruction booklet

### FIXGEN 84/5

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)  
Fixgen alone £5.50

### COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), Dragon, Atari (48K), Apple II

PRICE £12.50 (all inclusive)

phone 24 hrs

*Another winner in the range  
of Sensational Software....*

# AIR TRAFFIC CONTROL

This is not just a game but a simulation of everyday problems encountered by those real-life air traffic controllers. All air travellers are unconsciously dependant on the skill of these people and this program enables you to test your skills in manoeuvring aircraft safely around the air motorways and despatching them into the hands of others in neighbouring air space.

# MIKRO-GEN

**Home Computer Weekly**  
It is fascinating to watch, and interesting to play.  
Even on level one your interest is held. Level nine is so crowded that not even a real controller could cope.  
As absorbing as a flight simulator, but different!

instructions	95%
playability	100%
graphics	95%
value for money	90%
